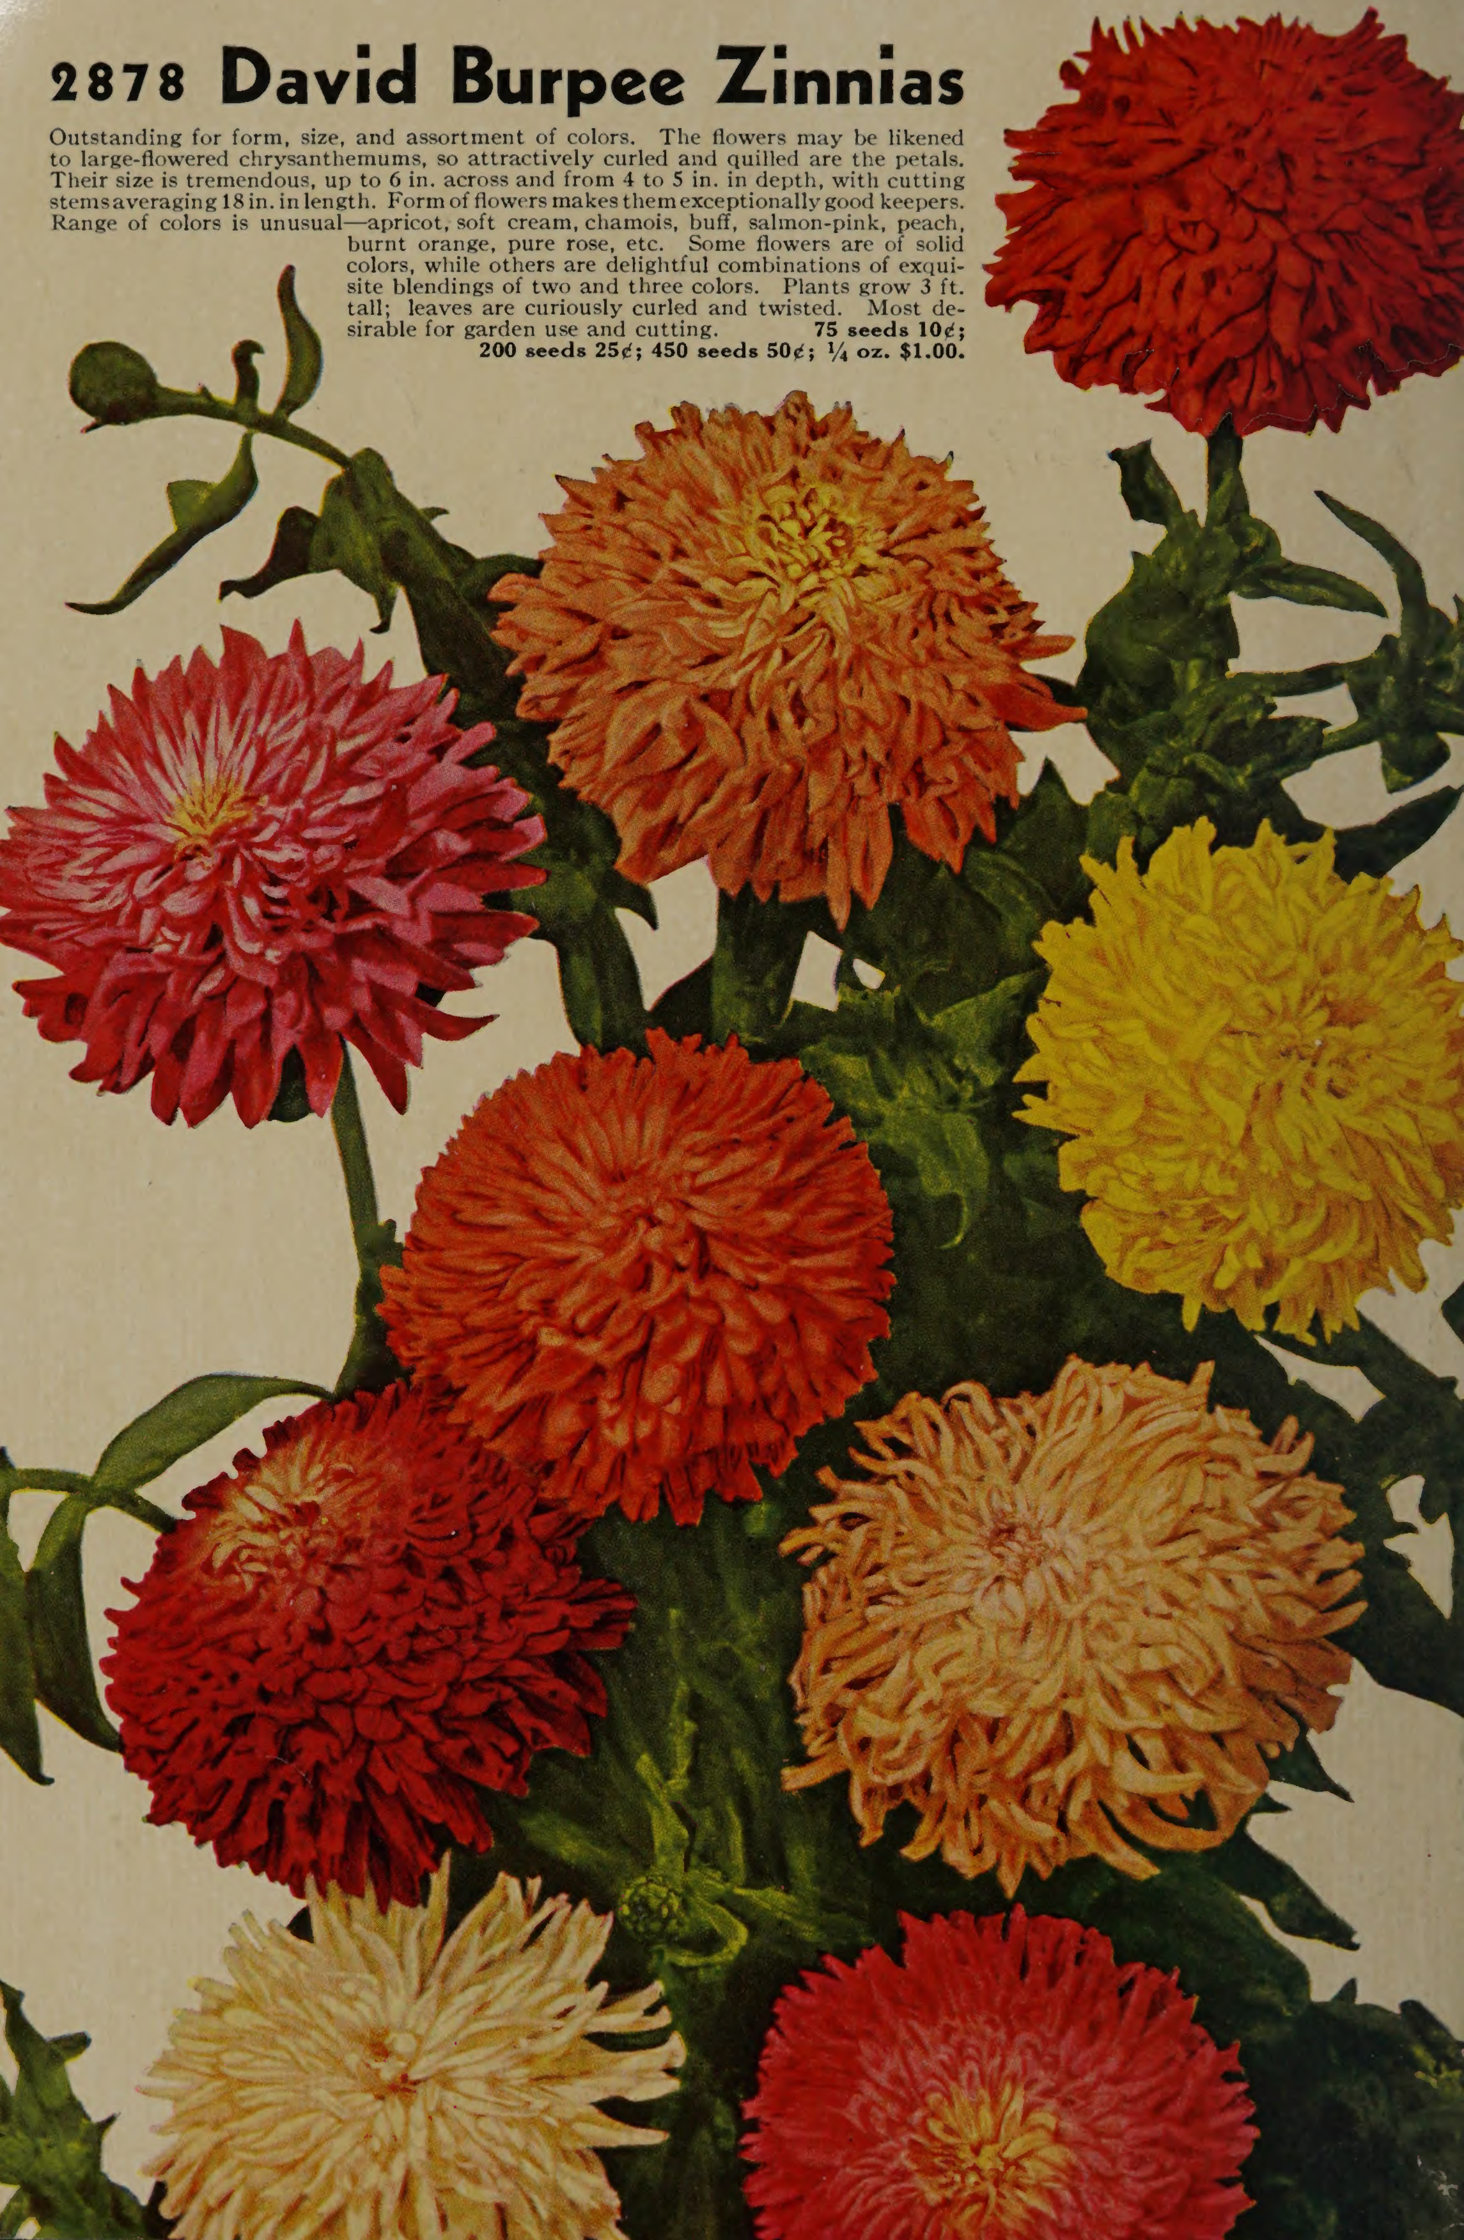
W. Atlee Burpee Co. *Seed Growers* PHILADELPHIA

2878 David Burpee Zinnias

Outstanding for form, size, and assortment of colors. The flowers may be likened to large-flowered chrysanthemums, so attractively curled and quilled are the petals. Their size is tremendous, up to 6 in. across and from 4 to 5 in. in depth, with cutting stems averaging 18 in. in length. Form of flowers makes them exceptionally good keepers. Range of colors is unusual—apricot, soft cream, chamois, buff, salmon-pink, peach, burnt orange, pure rose, etc. Some flowers are of solid colors, while others are delightful combinations of exquisite blendings of two and three colors. Plants grow 3 ft. tall; leaves are curiously curled and twisted. Most desirable for garden use and cutting. **75 seeds 10¢; 200 seeds 25¢; 450 seeds 50¢; ¼ oz. $1.00.**



2238 Wildfire Marigolds

Burpee's New Single Hybrids for 1941

See color picture on the front cover of this catalog

Flowers grow 2 to 3 in. across and come in the full range of colors found in the French type, including many of the most amazing and bizarre patterns and markings. There are solid colors, stripes, variegations, pencil markings, tippings, mottlings, specklings, and bi-colors. Colors include bright scarlet, deep orange, golden orange, golden, mahogany and yellow. On some plants the color varies from flower to flower. Flower shapes vary too. There are all types of petal forms, from long narrow petals to short broad ones; some flat, others curled and wavy.

Burpee's Wildfire Marigolds are fertile hybrids between the African and French Marigolds, which accounts for the wide variance in the colors and shape of the flower. Plants, too, vary in height from 14 to 20 in., so are not recommended for borders where an even, uniform height is desired. Wildfire, however, is ideal as a cut flower; we believe it is one of the best single flowers for cutting we have ever seen. Keeps nearly two weeks in water. Plants come into bloom within 8 weeks from seed and flower profusely until frost.

153 Burpee's New

Rhubarb Chard

See color picture on the back of this catalog

A new Swiss Chard that looks like Rhubarb. The leaf stalks, considered by many as the most delicious part of the Chard plant, are bright but delicate, translucent crimson; the rich color extends out through the veins into the dark green, heavily crumpled leaves. Easily grown, thrives everywhere.

You will enjoy the different, tasty, delicious flavor of Burpee's Rhubarb Chard. Whether you cook the leaf stalks alone, use only the leaves, or cook both together, you will find a sweetness you never knew existed in a leafy vegetable. Below are two favorite recipes. **50 seeds 15¢; 100 seeds 25¢; 225 seeds 50¢; ½ oz. $1.00.**

Rhubarb Chard Leaf Stalks Fried in Batter Make Good Fritters To serve six persons, pick three or four medium sized leaves. Trim away the leaf portion, leaving the stalk. Cut stalks into several pieces and boil until tender. Drain off water, dip in batter and fry in butter or shortening. **Batter**—1 egg; ½ cup flour; ½ cup milk; pinch of salt and pepper. Beat egg, add flour, milk, salt and pepper.

Rhubarb Chard Greens Cut up three or four young tender leaves and leaf stalks into a cooking kettle, adding only about ½ cup water. Cover with lid and boil until the stalk portion is tender. Drain off water. Chop up two strips of bacon and fry in a separate pan until done and mix with the cooked Chard. Add a little salt and pepper. Some prefer a tablespoon or two of vinegar added to the bacon.

Burpee's Famous Seed Farms and Experimental Grounds

Floradale Farms

Floradale Farms comprise hundreds of acres in the fertile Lompoc Valley, California—50 miles north of Santa Barbara. Seeds grown here have exceptional vigor, high vitality, and hardiness which assure sturdy growth and successful blooming wherever grown. Mild winters and long, cool summers are especially favorable for growing flower seeds. Plants have a long growing season and mature their seed during the dry, cool summer and fall.

Experimental work as well as seed growing is continually going on at Floradale. We are proud of the many new and valuable varieties we have originated on Floradale Farms; particularly notable are the Double Nasturtiums, Giant Ruffled Sweet Peas, Marigolds with Odorless Foliage, fertile hybrid Marigolds, new colors and shapes in Petunias, New Giant Chrysanthemum-like David Burpee Zinnias, and many more lovely flowers.

Fordhook Farms

At Fordhook Farms, many special strains of vegetables and flowers are produced. Here also are the largest and most complete Trial or Proving grounds in the world. Every variety of seed that we sell is tested for purity and vitality. In addition, we try out hundreds of varieties from foreign countries, making careful comparisons, and by hybridization and selection we are constantly improving the Quality of existing varieties and creating new ones. All this is done so that only the Best varieties and the Best Seeds that Grow can be offered to Burpee customers wherever they may be.

"Fordhook" long ago became a well-known and well-loved name among gardeners everywhere, for many of the famous Burpee introductions are named for the great Fordhook Farms—the original Burpee Seed Farms—located at Doylestown, near Philadelphia.

Making notes of Burpee's New Table Talk Tomato at Fordhook Farms

Dear Fellow Gardeners:

I am writing to you from Fordhook Farms. It is winter, and my thoughts are turned towards your gardens of 1941.

I know that almost all of you who read this page are good gardeners. Some are beginners, and I want to welcome them into the finest spot in the world.

There is an old Chinese saying, "If you want to be happy for life, become a gardener." I hope that all of you who read this will "be happy for life."

If you are not already one, then by all means "become a gardener" and plant Burpee's Seeds.

My father used to say to me, "David, always make your appeal to the best gardeners—the poor ones will follow the good ones, but the good gardeners will never follow the poor ones."

And now I make my appeal to you, good Gardeners of America. Please produce a surplus if you can. There is no surplus of food or flowers in the world. If you can grow in your garden more than you need, please, please do, and give it away. To help others is your best investment in happiness.

My father and I have supplied seeds to many million gardeners and I feel that I know all of you.

May you have a glorious garden in 1941 is my earnest wish.

Faithfully yours,

David Burpee

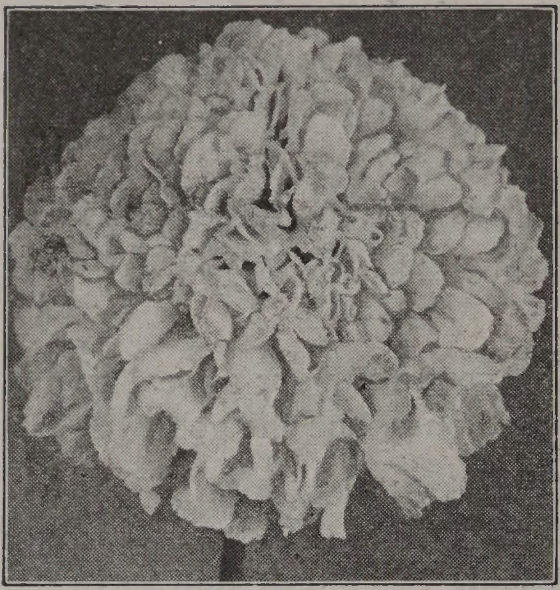
including the best new flowers for 1941



Burpee's New Scabiosa, Peace

2626 Peace Scabiosa

Honorable Mention, All-America Selections for 1941

The second in a new group of annual, semi-tall, large-flowered double Scabiosas. Peace is a companion to our Heavenly Blue Scabiosa—the Bronze Medal Winner, All-America Selections for 1940. Flowers are 1½ to 2 in. across, of perfect form, almost spherical in shape, pure white without any tingeing of pink or mauve. They are borne on long stems well above the foliage.

Plants are sturdy, vigorous, 2 ft. tall and bloom most profusely from midsummer until frost if flowers are not allowed to go to seed. Pretty in beds and borders; highly prized for cutting.
Pkt. 25¢; ⅛ oz. 60¢; ¼ oz. $1.00.

2615 Blue Brocade Petunia

Silver Medal Winner, All-America Selections for 1941

A valuable addition to the All-Double Dwarf Giant Fringed group of Petunias. Flowers are large, high percentage fully double, wonderfully fringed and ruffled and of a rich, true, violet-blue color enhanced by a velvety sheen. While all the flowers will be double, some carnation-flowered or smaller semi-double blooms may be produced. All are exceedingly handsome.

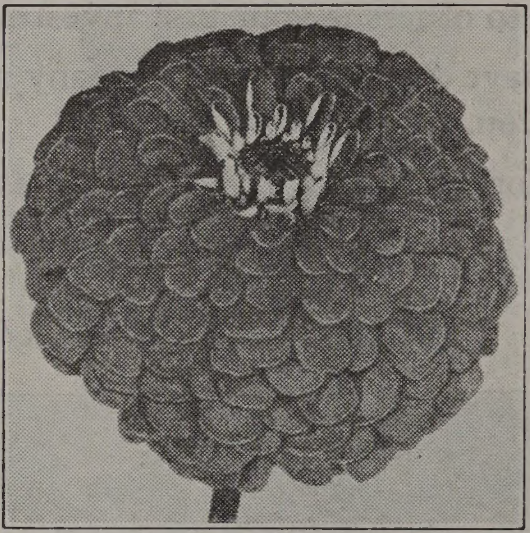
The plants are dwarf, compact and very free flowering. Usually, the dwarfer, stocky plants bear the most double flowers. Start seeds indoors eight weeks before your usual outdoor planting time.
Pkt. 75¢; 2 pkts. $1.25.

3211 Zinnia Black Ruby

Bronze Medal Winner, All-America Selections for 1941

A new zinnia of the Lilliput class which is especially fine for small bouquets where the larger flowered varieties are sometimes considered too large and coarse. A new color in small zinnias—blackish maroon; while the color is extremely deep it is by no means dull, for the velvety texture of the petals gives it a rich appearance.

Flowers are double, 1 to 1½ in. across and the same in depth. They are borne on very long, straight and wiry stems so are highly prized for cutting. Erect bushy plants 2 ft. tall.
Pkt. 25¢; ⅛ oz. 60¢.



Burpee's New Lilliput Zinnia, Black Ruby

1574 Calliopsis Alldouble Mixed

Double Calliopsis has been in commerce for some time, but those offered produced a high percentage of single flowering plants. We now have a strain that produces practically all double flowers—some are fully double, others semi-double. Flowers grow 1 to 1½ in. across, and are freely borne on long, graceful stems, making them desirable for cutting. Our mixture contains all of the colors and color combinations to be seen in Calliopsis—yellow, orange, mahogany, maroon and crimson.

Depending on location, plants grow 3 ft. tall and more. They flower profusely from early July until autumn if not allowed to go to seed. **Pkt. 25¢; 1/16 oz. 55¢.**

1982 Floradale Dianthus

An improved strain of Single Flowering Fringed Annual Pinks. The flowers are very large, single, and have deeply laciniated petals. Practically every color known in Dianthus is in this mixture—from pure white to deepest crimson with many shades of pink, salmon, scarlet and rose. In addition to self-colors, there are flowers of many fancy patterns such as may be seen in Old World chintz. Plants are compact and bushy, 12 to 15 in. tall, and extremely free flowering Ideal for use in low borders, edgings, and beds. **Pkt. 15¢; 2 pkts. 25¢; 5 pkts. 60¢.**

1573 Yellow Shaggy Calendula

Scotch or Pot Marigolds

Yellow Shaggy has the deepest flower heads of all calendulas. Flowers are so deep that they are globular, 3 in. across and almost as thick. The petals are quilled and deeply cut on the ends, giving the flowers a very shaggy and artistic appearance. It is the unusual shape of the petals that has given this calendula its appropriate name.

The color of the flowers is a bright clear yellow with a lighter yellow center, which is nearly covered by the mass of petals. Flowers are borne on very long stems and their form makes them excellent keepers. The well-formed bushy plants grow 1½ ft. tall and are loaded with their attractive flowers. One of the finest calendulas for beds, borders, and especially recommended for all cut flower purposes.

Pkt. 25¢; ⅛ oz. 60¢; ¼ oz. $1.00.

David Burpee Zinnia **75 seeds 10¢.**

2878 David Burpee Zinnias

The flowers are of a form never before seen in zinnias; they may be likened to a large-flowered chrysanthemum, so attractively curled and quilled are the petals. They will grow up to 6 in. across and are unusually deep, with cutting stems averaging 18 in. in length. The quilled form of the flowers makes them exceptionally good keepers.

Another outstanding feature of these zinnias is the unusual range of colors, many that have never been seen in zinnias before. Pastel shades predominate, such as apricot, soft cream, chamois, buff, terra-cotta, burnt orange, soft rose, and peach. Some flowers are of solid colors while others are delightful combinations of two and three colors.

Some of the plants have leaves which are curiously curled and twisted; usually these produce flowers the petals of which are extremely quilled and curled. Most desirable for garden use and cutting. 3 ft. tall.

A wealth of color in late summer and fall unequalled by any other flower. Easy to grow in ordinary garden loam and a sunny location. Remarkable diversity of habit and size of flowers; each class has its own particular place in the garden. Lovely for cutting, the flowers keeping in fine condition for a long time.

✓ Carnation Flowered

2355 **Canary Bird** (*New*) Large carnation like flowers, 3 to 3½ in. across, of a clear, bright canary-yellow — a color that is so desirable in the garden and highly prized for cut-flower purposes. In addition, Canary Bird has foliage without the usual marigold odor. Plants grow about 2 ft. tall, are extremely vigorous, and come into bloom in 18 weeks after the seed is sown. From then until frost they will continue to produce a fine display of flowers on very long stems. **100 seeds 25¢; ⅛ oz. $1.00; ¼ oz. $1.75.**

2193 **Tetra** The Tetra Marigold is the first flower produced by the use of a chemical, known as colchicine. Tetra is the result of the doubling of the chromosomes of the popular Guinea Gold Marigold. Since a plant in which the chromosome number is doubled is technically known as a tetraploid, we have named this new marigold "Tetra."

Flowers have the same attractive carnation flowered form as Guinea Gold, but are much larger, 3½ to 4 in. across, and of a very deep orange color. The petals are frilly and possess unusually heavy substance so that the flowers have excellent keeping qualities.

Plants grow 2 to 2½ ft. tall and have much greater vigor than other marigolds. Begin blooming in about 19 weeks from seed. If you wish to have a long season of bloom, we suggest that you start seeds early indoors. Showy in beds and borders; valuable for cutting. **Pkt. 15¢; ⅛ oz. 50¢; ¼ oz. 85¢.**

✓ 2203 **Butter and Eggs** The first bicolor African Marigold. Flowers are an attractive light butter-yellow, each petal delicately shaded deep golden yellow at the base, which gives an air of refinement and distinction. The medium sized flowers are of beautiful carnation form, 2 to 2¾ in. across; they have good substance, which insures long keeping qualities.

Plants grow 2 ft. tall and are extremely free flowering, the first blooms appearing in about 14 weeks after the seed is sown. The foliage is entirely free of the usual marigold odor. **100 seeds 25¢; ⅛ oz. $1.00; ¼ oz. $1.75.**

✓ 2295 **Golden West** Earlier blooming, larger flowered, dwarfer growing, and more floriferous than Guinea Gold. Plants start to bloom in 15 weeks after seed is sown. Flowers grow 3½ in. and more across, with petals loosely and gracefully placed. Plants grow 2½ ft. tall, and as they branch freely from near the base, the stems are quite long and borne so profusely that the plants are literally covered with deep orange flowers until killed by frost. Much like Burpee Gold Improved except that Golden West has foliage with the usual marigold odor. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

Canary Bird—New Carnation Flowered Marigold with Odorless Foliage **100 seeds 25¢.**

✓ 2294 **Burpee Gold Improved** Earlier, larger, dwarfer growing, with more flowers than Guinea Gold, and, above all, foliage is entirely free of the usual marigold odor. Glorious deep orange double blooms, 3½ in. across, with the long petals loosely and artistically arranged. Plants grow 2½ ft. tall, begin blooming in 15 weeks, and continue most freely until frost. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

✓ 2277 **Tom Thumb, Golden Crown** Dwarf or Tom Thumb form of the popular Guinea Gold; plants grow about 10 in. high. Flowers are large, golden orange, and borne most abundantly. Especially suited for borders or bedding; nice for cut flowers. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

✓ 2180 **Guinea Gold** Brilliant orange carnation-like flowers flushed with gold. The first marigold of this type to be introduced. **Pkt. 10¢; ¼ oz. 30¢; ½ oz. 50¢.**

2237 Idabelle Firestone Marigolds

Named in honor of Mrs. Harvey S. Firestone

Idabelle Firestone Marigold is the first fertile double African-French Hybrid Marigold ever to be offered. Its large size and unusually bright red color make it one of the outstanding introductions of the year.

Flowers are fully double, 2 to 2½ in. across, bright reddish mahogany, and borne on very long, clean stems. Plants are quite large and vigorous, often reaching a height of 3 ft. and spreading as much across. Each plant bears a large number of flowers over a remarkable long period of time; they are extremely early flowering, the first blooms appearing in about 9 weeks after the seed is sown and they continue to bloom freely until frost. Besides being an excellent cut flower, it is very showy and attractive in beds and borders.

The large size and extremely red color of Idabelle Firestone Marigold is the result of its ancestry, which consists of three-fourths French Marigolds and one-fourth African. The only evidence of the African parent found in this wonderful Marigold is the large size of the flower, the deep red color being characteristic of African-French Hybrids. Otherwise, it is typically French in appearance, with the same attractive feathery dark green foliage and the same odor as found in other varieties of French Marigolds. Being hybrids, a few plants may appear in any planting with yellow or yellow and red variegated flowers; these, too, are beautiful.

Be sure to grow Idabelle Firestone—the largest, reddest of all hybrid Marigolds and one of the finest for cut-flower use. It is the first fertile double Marigold to be introduced containing blood of both French and African Marigolds. **100 seeds 25¢; 225 seeds 50¢; 500 seeds $1.00.**

2304 Spry—New Extra Dwarf Double French Marigold

Silver Medal Winner,
All-America Selections for 1941

The most profuse blooming of all Marigolds. Plants are of the true Lilliput form, extremely dwarf and compact, their maximum height being only 9 in. and their spread 15 in. Spry is so true that every plant is exactly of the same dimension and habit, so that borders and edgings of it will be perfectly uniform.

Flowers resemble those of the popular favorite "Harmony" in that they are composed of a pincushion crest in the center surrounded by several rows of guard petals. The center crest is a bright, clear yellow and the guard petals are a lovely contrasting mahogany-red. These flowers, which grow 1½ to 1¾ in. across, completely cover the tiny plants as seen in the photograph. Plants come into bloom in less than 9 weeks after the seed is sown and continue to produce their flowers most profusely until frost. An entire plant is a bouquet in itself. Especially suited for beds, borders, edgings and for pot culture indoors during the winter.

100 seeds 25¢; 225 seeds 50¢; 500 seeds $1.00.

2301 Scarlet Glow—New Dwarf Double French Marigold

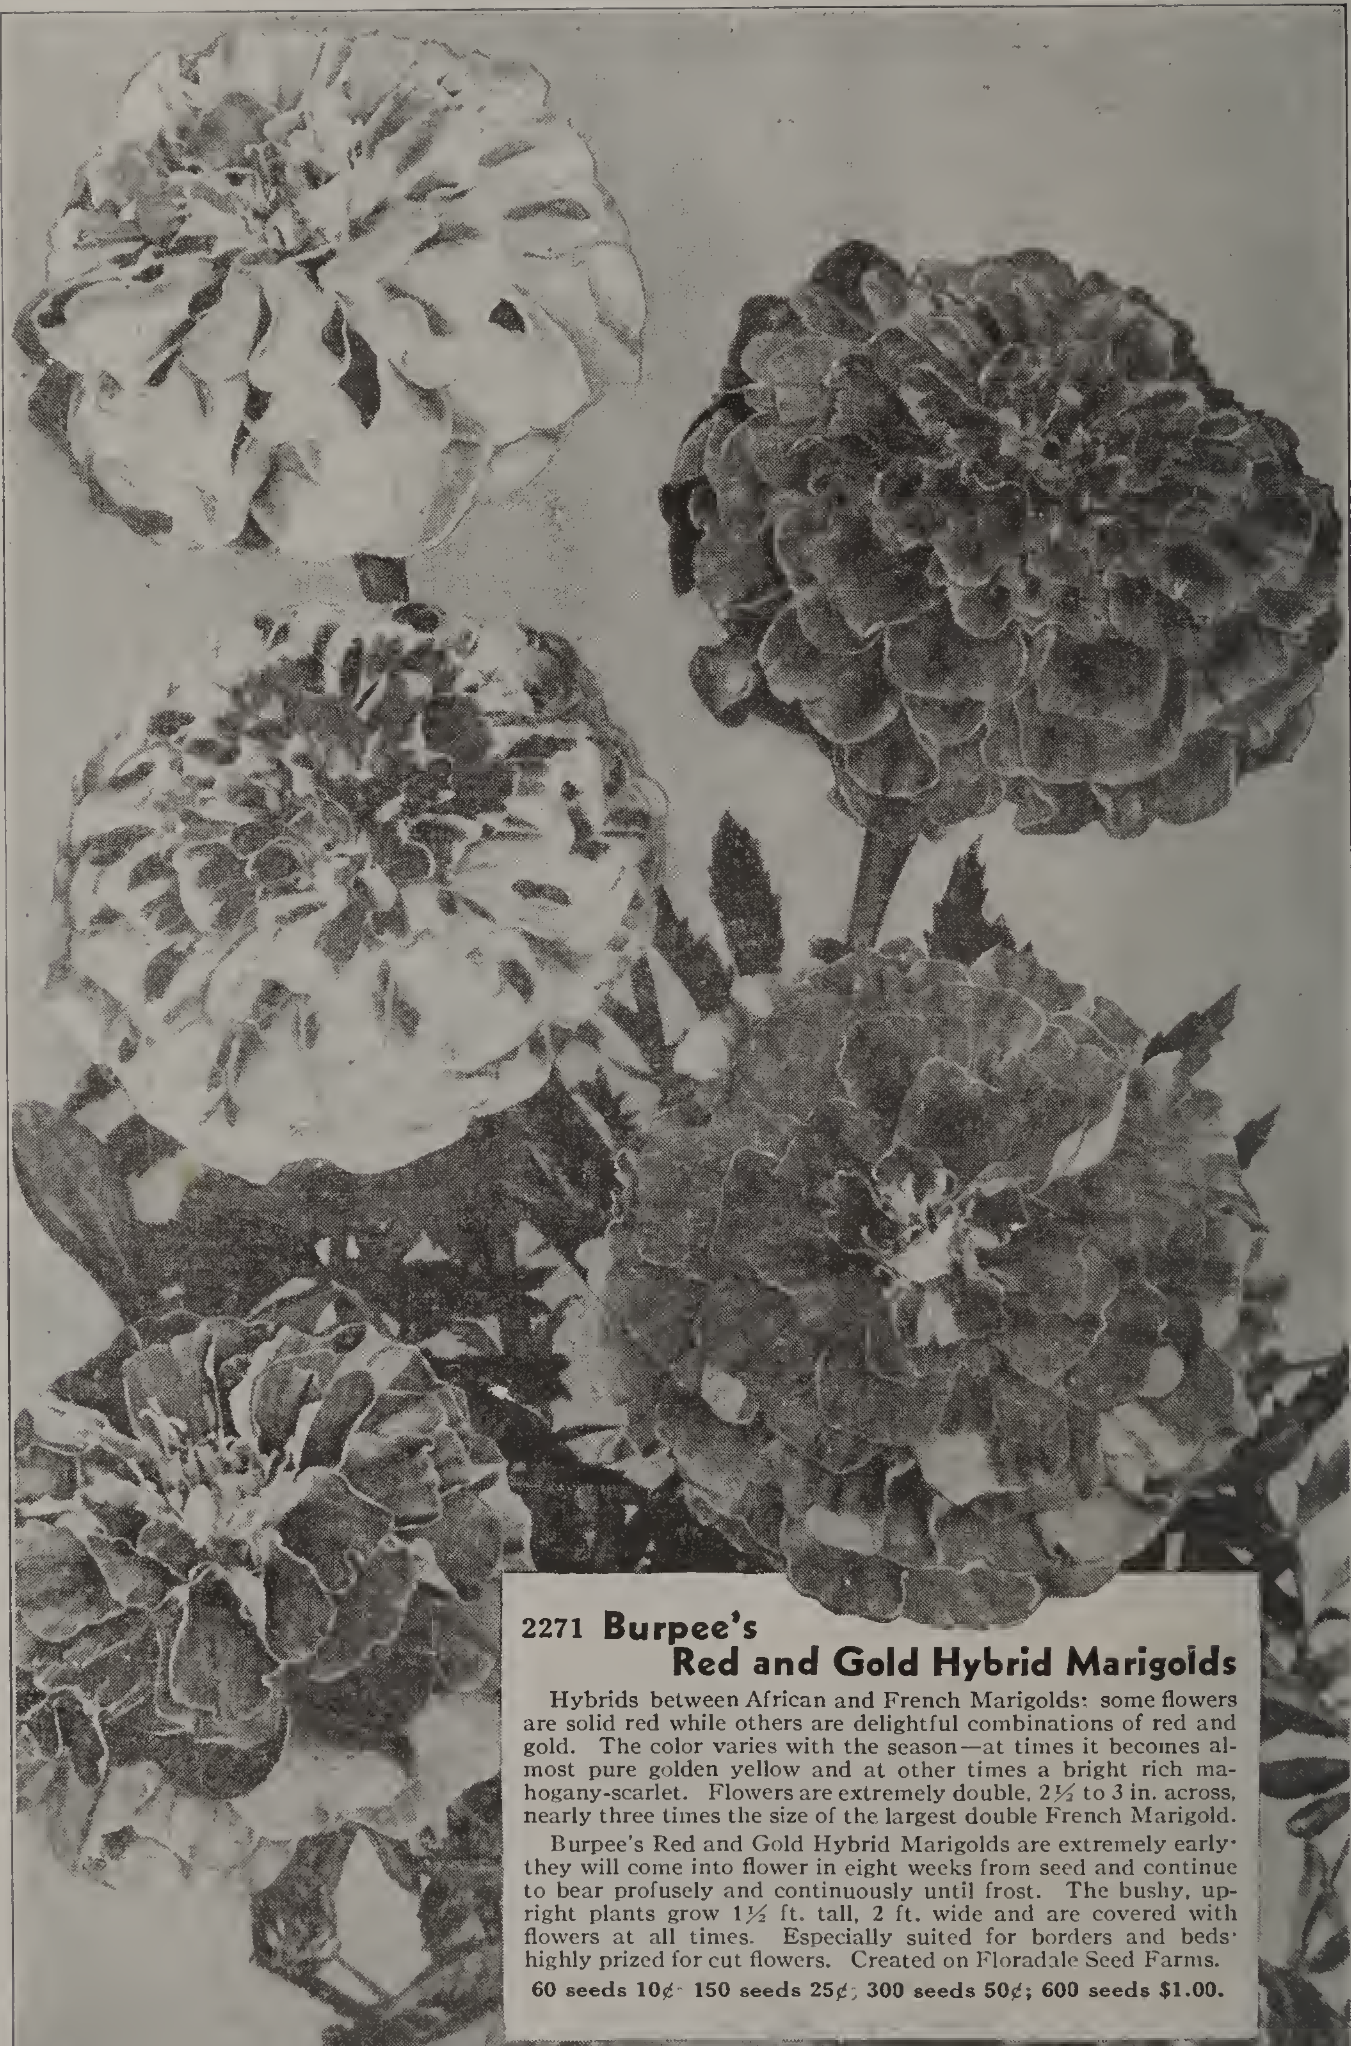
Scarlet Glow Marigold **100 seeds 25¢.**

Honorable Mention,
All-America Selections for 1941

The brightest red of all Dwarf Double French Marigolds. Flowers open deep scarlet and as they age turn to a rich tangerine color. If grown in sections where summers are hot, flowers may take on a coppery or bronzy tone which is quite attractive. In the fall, when weather gets cool, flowers become much redder. They are fully double, 1¾ to 2 in. across, and borne most profusely on dwarf plants which obtain a height of 10 in. and a spread of 18 in. In addition to Scarlet Glow being the brightest red, large flowered French Marigold, it is extremely early. Plants begin to bloom in 10 weeks from the time the seed is sown and continue without interruption until frost. Unlike some Marigolds whose first flowers are not as good as those which come later, Scarlet Glow produces large, perfect double flowers from the very first. While primarily a plant for beds, borders, and edgings, stems are long enough for cutting.

100 seeds 25¢; ⅛ oz. $1.00; ¼ oz. $1.75.

Scarlet Glow and the other two varieties of new Marigolds on this page are Burpee originations, created on Floradale Farms in California.



2271 Burpee's Red and Gold Hybrid Marigolds

Hybrids between African and French Marigolds; some flowers are solid red while others are delightful combinations of red and gold. The color varies with the season—at times it becomes almost pure golden yellow and at other times a bright rich mahogany-scarlet. Flowers are extremely double, 2½ to 3 in. across, nearly three times the size of the largest double French Marigold.

Burpee's Red and Gold Hybrid Marigolds are extremely early; they will come into flower in eight weeks from seed and continue to bear profusely and continuously until frost. The bushy, upright plants grow 1½ ft. tall, 2 ft. wide and are covered with flowers at all times. Especially suited for borders and beds; highly prized for cut flowers. Created on Floradale Seed Farms.

60 seeds 10¢; 150 seeds 25¢; 300 seeds 50¢; 600 seeds $1.00.

Burpee's Famous Zinnias

The value of zinnias as garden and cut flowers cannot be stressed too highly. Their ease of culture, long blooming season, together with their wide range of color and varied flower forms, make them one of the most popular of all annual flowers. They are one of our leading specialties. Zinnias are heavy feeders, and while they will grow in poor soil and under unfavorable conditions, they must have rich, well-fertilized soil and be watered freely during periods of dry weather if the finest flowers are wanted. Plant in full sun; they will not do well in the shade or near trees. Zinnias are hot weather flowers, coming into their full beauty in midsummer and continuing until fall. Flowers last for days when cut; different size flowers and colors for every purpose. After the soil has become thoroughly warm, sow seed in the open ground where plants are to bloom. Thin out large flowered varieties to stand 2 ft. apart; smaller flowered types, 1 ft. Zinnias will bloom in about two months. All the different classes of zinnias are easy to grow.

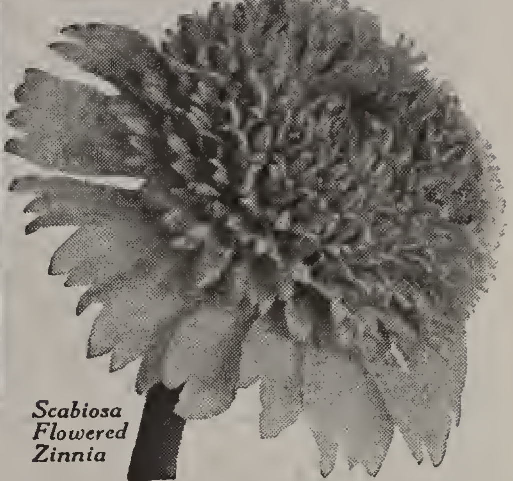
Fantasy Zinnia

Fantasy Zinnias

Ever since introduced a few years ago, Fantasy Zinnias have been great favorites with those who like something out of the ordinary and unusual. The well-rounded, medium sized double flowers, 3 to 3½ in. across, are composed of a mass of twisted, tubular petals which give them the appearance of a shaggy chrysanthemum. Plants grow about 2 ft. tall and are very profuse blooming throughout the summer and fall. Fantasy Zinnia, Mixed Colors, and Star Dust (yellow Fantasy) each won an Award of Merit in the All-America Selections.

2918 **Star Dust** Deep golden yellow flowers of the true Fantasy type—remind one of a miniature cactus dahlia. They are admirable for cutting; showy and effective in the garden. Very free blooming. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

3212 **Mixed Colors** Attractive, shaggy, double flowers in an unusual range of colors, some of which have not been seen in any other zinnia mixture. Medium sized blooms, unexcelled for cutting and particularly appealing in the garden. Wonderful form and substance. **Pkt. 10¢; ⅛ oz. 25¢; ¼ oz. 40¢; ½ oz. 70¢.**



Scabiosa Flowered Zinnia

Scabiosa Flowered Zinnias

Differs from all other zinnias in the formation of the flowers, which resemble those of the double-crested cosmos. The flowers are of medium size, 2½ to 3 in. across, composed of a row of broad ray or outer petals, surrounding a cushion-like crown or mound of quill-like petals similar in form to the flowers of the annual scabiosa. We have saved seed from true-to-type flowers, but some variations may appear. Fine border plants; nice for cutting.

3225 **Golden Yellow** Most exquisite golden yellow; bright and showy in the garden. Effective in bouquets. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

3226 **Scarlet** Rich, brilliant scarlet; vivid and intense shade. Always admired. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

Radio Zinnias

3229 **Finest Mixed** When first open, the flowers have somewhat of a star-like appearance, but as they mature they become round, very full, and grow about 3 in. across. Flowers are of many colors; most of them have a two-toned effect, due to the different shade on the reverse of the curved or fluted petals. Planted in beds or borders, it will make a colorful display and yield an abundance of long-keeping cut flowers for home decoration. 3 ft. tall. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

For other Burpee Zinnias, see pages 16, 18, 19, and 20.

Tom Thumb Zinnias

Fine for edgings, rock gardens and pots. **Pkt. 15¢; ⅛ oz. 35¢; ¼ oz. 60¢.**

Burpee's Double and Super-Double Nasturtiums

2334 **Mixed** These New Hybrids were created by a combination of mutations and cross-pollinations between Burpee's Super-Double and Burpee's Double Hybrid Nasturtiums. Seed of this wonderful mixture will produce various types of flowers; some will be semi-double, like Golden Gleam, others will be Super-Double, like the illustration opposite. Burpee's Super-Double Nasturtiums (*Tropaeolum majus Burpeeii*), when fully open, resemble greenhouse carnations.

Plants are vigorous and produce an abundance of large, sweet-scented flowers, 3 in. across. The Super-Doubles have as many as **40 to 60 true petals,** and the double hybrids have 8 to 10. Extreme doubleness and unusually large size of the flowers constitute two of the most important characteristics of the Super-Double type. Stems of the Super-Doubles are thicker and the plants sturdier and more vigorous than other nasturtiums. **Packet of 10 seeds for $1.50; 3 packets for $4.00.**

Burpee's Dwarf Double Nasturtiums

Garnet Gem
Pkt. 15¢.

The plants of Burpee's Dwarf Double Nasturtiums are of compact, bush or globular form, about 1 ft. high and 1½ ft. across. The gorgeous, giant double and semi-double, sweet-scented flowers are produced most freely on very long stems; they are fine for cutting. The irregularly placed petals give the blooms an unusually artistic appearance. The dwarf, rounded plants are most attractive for beds, edgings, rock gardens and pot culture.

2306 **Delightful** Soft salmon-cerise, the upper petals prettily marked crimson maroon at the base, and as flowers age, they often take on a deeper shade of salmon-cerise than the lower petals. Unsurpassed for cutting as the stems are exceedingly long and strong; flowers are held well above the luxuriant, bright green foliage of the neat, well-rounded, dwarf plants. **Pkt. 15¢; oz. 35¢; 4 ozs. $1.00.**

2336 **Garnet Gem** Striking color—deep, rich, very bright garnet-red with just enough orange to enliven it with an iridescent glow. 2305 **Orange Glory** The large, sweet-scented flowers are bright orange; the base of each of the upper petals and most of the inside of the throat are painted with deep garnet-brown. Narrow lines of this latter color radiate like a fan out over the upper petals, but disappear in an overlay of orange-chrome. Petals are wonderfully fluted and crinkled. Plants are of the true dwarf or bush form. **Pkt. 15¢; oz. 35¢; 4 ozs. $1.00.**

2348 **Primrose Gem** The dwarf, compact plants are literally covered with giant double, sweet-scented, soft primrose colored flowers. Bushy, uniform, globe-shaped little mounds above which the exquisitely formed flowers are borne on long, strong stems. **Pkt. 15¢; oz. 40¢; 4 ozs. $1.25.**

BURPEE'S PETUNIAS

Petunias are among the most satisfactory annuals for garden display. They succeed in ordinary, well-drained garden loam such as will grow a good crop of vegetables, and in a location where they receive plenty of sunlight. Do not plant in the shade nor in soil that is overly rich We offer an extra select assortment.

Some types are especially suited for bedding and pot culture, others are ideal for edgings and mass plantings, while others are unexcelled for porch and window boxes; all are excellent for cutting

Balcony or Large Flowered Bedding Petunias *(Petunia pendula)*

Burpee's Giant Ruffled Petunias

Petunia hybrida grandiflora superbissima

Burpee's Giant Ruffled Petunias are unsurpassed for bedding, borders, cutting, and most valuable for porch and window boxes as well as for pot culture. The flowers, with their large, wide-open throats, are deeply ruffled, artistically veined, and, when well grown, often measure 5 to 7 in. across. Flowering plants can be had in four months from the time of sowing the seed. Plants bloom until frost.

Seeds are quite small and most valuable. Sow them carefully indoors in pots or shallow boxes filled with equal parts of good garden loam and leaf mold to which has been added a generous quantity of fine clean sharp sand. Make sowings about eight weeks before your usual outdoor planting time. Plants may be set in the open ground after soil has become warm and all danger of cold weather is past.

BURPEE'S SNAPDRAGONS

Snapdragons (botanically antirrhinums) have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding in ordinary well-drained garden soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seeds outdoors when soil has become quite warm; for earlier blooms sow indoors six weeks before your regular outdoor planting time. Full cultural directions on every packet. Best treated as annuals, although they are biennials in sections having mild winters.

BURPEE'S ASTERS

A continuous display of asters from early summer until frost can be had by planting early, midseason, and late varieties. If you plant some very early varieties, we suggest that you have seedlings of later flowering ones or other flowers coming along to take the place of the earlies when they are through blooming.

Asters are easy to grow. They prefer rich, well-drained soil, plenty of sunshine, and ample moisture. They begin to bloom in 14 weeks to four months after seed is sown, varying according to type and climate. For earliest blooms sow seed indoors in boxes or pans six weeks before your usual outdoor planting time.

*** Varieties marked with an asterisk (*) are the Wilt-Resistant Strain. They are highly immune to "Wilt disease" or "Stem-rot."**

Giant Branching

American, Semple's or Vick's Branching

From midsummer until frost these asters will produce a profusion of beautiful flowers. The blooms are quite large, 3½ to 4 in. across, and fully double. The plants grow 2 to 3 ft. tall and branch freely, producing stems frequently 2 ft. long, which makes this class especially fine for cutting. Nothing could be more dazzling than a blaze of color such as these giant flowers will give.

Burpee's Cosmos

Beautiful summer and fall blooming plants; decorative in the garden and wonderful for cutting. Always popular, but more so now than ever, due to the introduction of the early midsummer flowering type a few years ago, followed by the beautiful early yellow cosmos, Orange Flare and the later golden orange flowers of Burpee's Golden. Following these introductions is the Mammoth Sensation—the earliest and largest of all cosmos to date. Plant as many varieties as space will permit, for a garden is incomplete without this lovely flower. They are old favorites, a constant expression of friendliness, happiness, and memories. One of the easiest flowers to grow. Do well anywhere but succeed best in a well-drained soil and a sandy location. Stake tall growing varieties.

Larger flowers, if wanted for exhibition or other purposes, may be obtained by disbudding. All-America Winner.

Burpee's Larkspurs

Giant Imperial Larkspur, Glitters **Pkt. 15¢.**

One of the most beautiful and desirable **annuals** for the garden and cutting. Easily raised, quick growers, and very free flowering; produce a wealth of large, double blooms on long, attractive spikes. Even the deep green, finely divided foliage is pretty.

The culture of annual larkspur is quite easy. They do best in a sunny position, in rich, well-drained garden soil free from fresh manure. As they like cool weather in which to germinate and to grow best, seed should be sown as early in the spring as the ground can be worked—the earlier, the better, but do not sow in cold, wet ground. We suggest sowing seed where plants are to bloom, as they sometimes resent being transplanted. When seedlings are large enough to handle, thin to stand 1 to 1½ ft. apart.

Giant Imperial

Large, double flowers fill the spikes, the laterals coming into bloom at almost the same time as the main spike, which is quite unusual. Spring Flowering Sweet Peas

Come into bloom, outdoors, between the Early and Giant Spencer classes. Plants are quite vigorous and what the flowers lack in size is made up by the heavy crop of blooms produced. Vines seem more heat resistant than other Sweet Peas. Under glass they are unusually free flowering and prolong the spring cutting season.

We offer three colors, each of which received an award in the All-America Selections for 1940:

3470 **Blue** Clear marine blue; free bloomer.

3479 **Lavender** Lovely soft shade of lavender.

3447 **Rose Pink** Beautiful rose-pink on white.

Any of these 3 separate colors: **Pkt. 15¢; ½ oz. 30¢; oz. 45¢; 4 ozs. $1.35; ½ lb. $2.50; lb. $4.50.**

Burpee's Early Flowering Sweet Peas

Varieties are arranged in each color class from deep to light shades

Burpee's Early Flowering Sweet Peas come into bloom 3 to 4 weeks earlier than the Summer Flowering varieties offered on pages 65 to 69. They are especially adapted for growing in frost-free sections and for earliest blooms outdoors in the North, also valuable for winter flowering under glass. They are being planted more and more every year.

If you live in a locality where the late Sweet Peas have not done well for you, try some Early Flowering. They will bloom before the summer heat arrives. Sweet Peas do best in cool weather. If seed was not sown in the fall, sow as early in the spring as the ground can be prepared. They prefer an open, sunny location, and deep rich soil which must be well drained.

Hardy perennial flowers are suited for so many purposes that they are essential and permanent features of every garden.

Burpee's Perennial Flower Seeds

Perennial Flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Perennials are most important flowers in the garden. With proper selection they can be had in bloom from early in the spring until late in the fall, beginning with the lovely, dainty Rainbow Rock Cress (Aubrietia), Golden Alyssum, Siberian Wallflower, Columbine, and many others, ending the season with the fall Chrysanthemums. Cultural directions are given on every bag. The Burpee leaflet, "Perennials from Seed," will be sent **free** upon request.

Average heights and blooming season are given in the description for each class; some variation is natural in different localities.

BURPEE'S DAHLIA ROOTS

Each year on our Fordhook Farms we try out hundreds of varieties of dahlias and select those that are the best growers, freest bloomers, and which we recommend as the best for you to plant. All are listed here, with some outstanding varieties that we ourselves have created. Whether you select the massive Decorative, the lovely Cactus, or the small Pompon varieties, you will be delighted with the results, whether for garden display or cut-flower purposes. We supply **strong root divisions** from field-grown clumps.

The American Dahlia Society has adopted a classification for all dahlias according to the formation of the flowers. After each name we use initials to denote the class to which that variety belongs. Thus:

F. D. = Formal Decorative; I. D. = Informal Decorative; C = Cactus; S. C. = Semi-Cactus.

Hardy Garden Lily Bulbs

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established, they will increase in beauty each year. Most all lilies delight in a sunny location, but mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are highly decorative in the border, while the dwarfer ones also give a charming touch of beauty to the rock garden. Lily bulbs differ greatly in size according to variety, some 1 in. across, others 3 or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture.

Burpee's New and Special Vegetables

47 Burpee's Tender Pod

All-America Bronze Medal Winner for 1941

Tender Pod Bean has quality, tenderness, succulence, and flavor from the time the pods first reach edible size until the seed is well developed. The pods are 4½ to 5 in. long, thick, round in cross section, smooth, deep, dark green in color, curving slightly, with long and distinctively curved tips. They are stringless, of course, very fleshy, brittle, and succulent. The seed is pearly white, with a small red spot on either side of the eye so that it is also suitable for use as a dried bean. **The most tender podded bush bean.**

Tender Pod Bush Bean will be of the greatest value to the home garden, where its superior table quality can best be appreciated. For commercial use the pods may be a little small; however, for a quality trade, Tender Pod is worth a test, and regardless of what bean you grow, make a trial planting of Tender Pod just to see how good a green bean can be. Ready to pick in about 48 days. Crop is very short. **Pkt. (60 seeds) 15¢; 2 pkts. 25¢; ½ lb. $1.25.**

153 Burpee's Rhubarb Chard

Here's a colorful vegetable with a new flavor—a "green" that isn't green and looks like Rhubarb.

If you have grown Chard before, you know its ease of cultivation; that it thrives anywhere; that it produces throughout the season; that no other vegetable gives so much for so little trouble.

Rhubarb Chard grows like the best of the green varieties. In 60 days from the time the seed is sown the plants are 18 to 20 in. tall, and if allowed to grow longer (which they will do without losing either their tenderness or flavor), reach a height of 2 ft. The leaves are long and moderately broad, very thick, tender, heavily crumpled, dark green in color with crimson veins. The stalks begin at the ground level and grow straight, clean, and upright for 10 or 12 in. before the leaves begin. On well-grown plants stalks are 2 in. and more across, slightly ridged and bright but delicate translucent crimson, sometimes shaded orange on the inside, from end to end. *See back cover for color picture of Rhubarb Chard and page 1 for two of our favorite recipes.*

50 seeds 15¢; 100 seeds 25¢; 225 seeds 50¢; ½ oz. $1.00.

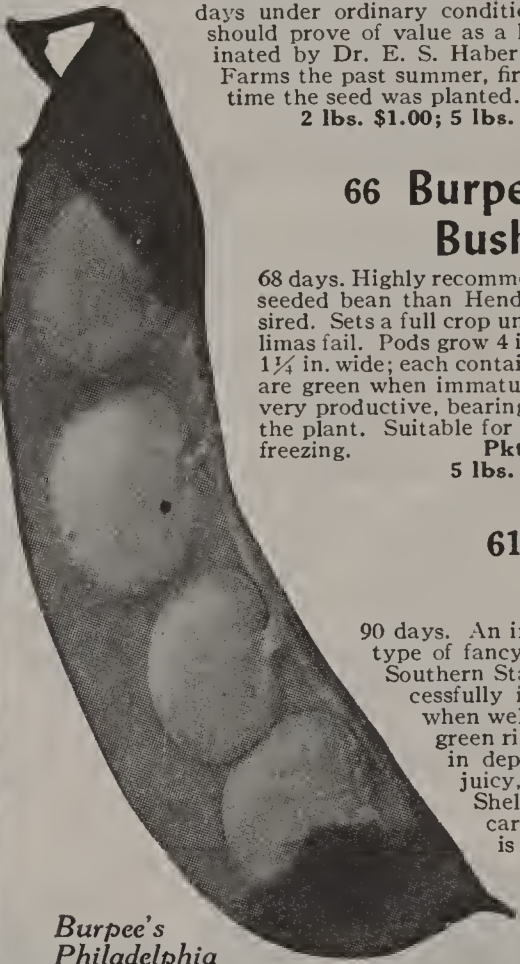
Hybrid Sweet Corn, Ioana

323 Hybrid Sweet Corn, Ioana

Bronze Medal Winner, All-America Selections for 1940

67 days. Ears grow 7½ to 8 in. long, uniform and cylindrical, well filled with 12 or 14 rows of deep, medium narrow, light yellow kernels of good quality. Highly resistant to drought and bacterial wilt. Has been found valuable for canning as the quality is excellent and the ears are uniform in maturing; nearly all the crop is ready within several days under ordinary conditions. Good for the home garden and should prove of value as a late-midseason corn for market. Originated by Dr. E. S. Haber of Iowa State College. At Fordhook Farms the past summer, first ears were pulled in 67 days from the time the seed was planted. **Pkt. 15¢; ½ lb. 35¢; lb. 55¢; 2 lbs. $1.00; 5 lbs. $2.20; 10 lbs. or more @ 41¢ per lb.**



Burpee's Philadelphia Bush Lima Bean

66 Burpee's Philadelphia Bush Lima Bean

68 days. Highly recommended where a larger-podded and larger-seeded bean than Henderson's Bush or Wood's Prolific is desired. Sets a full crop under conditions where some large-seeded limas fail. Pods grow 4 in. long, straight to slightly curved, flat, 1¼ in. wide; each contains 3 or 4 flat, medium-sized beans which are green when immature turning white. Plants are vigorous, very productive, bearing the bulk of their pods in the center of the plant. Suitable for the home garden, market, canning and freezing. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. $1.40; 10 lbs. or more @ 26¢ per lb.**

610 Watermelon Florida Giant

90 days. An improved melon of the Stone Mountain type of fancy size and quality, best adapted to the Southern States but early enough to be grown successfully in the North. Fruits average 35 lbs. when well grown, oval in shape, with thick, dark green rind, averaging 14 in. in length and 12 in. in depth. The flesh is brilliant pink, crisp, juicy, free from strings and of excellent flavor. Shell is thin but very hard, and the melons carry well in shipping without injury. Seed is brown mottled with black. **Pkt. 15¢; oz. 30¢; 4 ozs. 85¢; ½ lb. $1.25; lb. $2.25; 2 lbs. $4.20; 5 lbs. $10.10; 10 lbs. or more @ $1.90 per lb.**

Hybrid Sweet Corn
319 Spancross

Honorable Mention, 1941 All-America Selections

71 days. The earliest hybrid corn of marketable size and good quality; resistant to bacterial-wilt and also somewhat cold resistant. Plants grow 4 to 5 ft. tall with the ear set low on the stalk. Ears are 6½ in. long, 1¾ in. diameter, slightly tapering, well filled to the tip with 10 or 12 rows of golden yellow kernels of very good quality. **Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. $1.10; 5 lbs. $2.40; 10 lbs. or more @ 45¢ per lb.**

841 Pepper, Sweet Banana

All-America Bronze Medal Winner for 1941

60 days. A distinctly new type of pepper, bearing some resemblance to Sweet Hungarian. The pointed fruits measure 6½ to 7 in. long by 1½ in. thick, with a banana yellow color turning to a brilliant red at maturity. The flavor is sweet and appealing, and the flesh is thick for a pepper of this type. Heavy yielder; 20 to 24 in. tall. **Pkt. 25¢; ½ oz. 55¢; oz. $1.00; 4 ozs. $3.00.**

1028 Squash, Yankee Hybrid

All-America Bronze Medal Winner for 1941

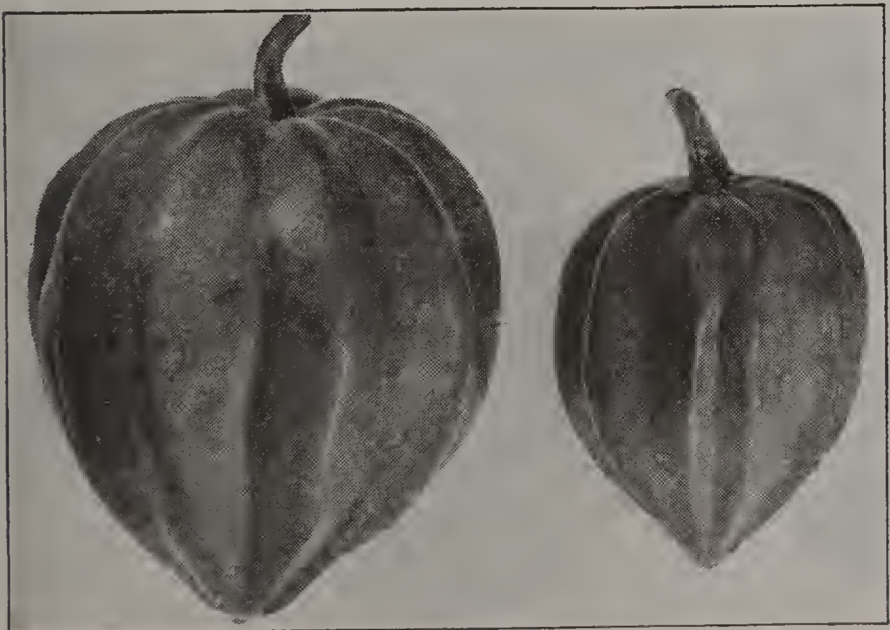
50 days. A true first generation hybrid squash of the Early Prolific and Connecticut Straightneck types, both previous All-America varieties, and developed by Dr. L. C. Curtis of the Connecticut Agricultural Experiment Station. The fruits mature from 3 to 10 days earlier than other varieties of this class, and at the same time the yield is much larger because of hybrid vigor. Although slightly shorter than Connecticut Straightneck, the fruits are much more uniform, an important consideration from the standpoint of the commercial grower. Recommended for both home and market gardener. **Pkt. 25¢; ½ oz. $1.75; oz. $3.00; 4 ozs. $9.00.**

440 Endive, Cos Type Batavian

Honorable Mention, 1941 All-America Selections

100 days. Cos Type Endive is different enough to be considered a new vegetable. The young plants resemble Full Heart Batavian but the leaves are much broader and rounder. As plants develop they become more erect and at maturity look like large Cos lettuce. The hearts are full and nicely blanched to a clear yellow; they have a distinct flavor, being sweet and yet retain the tang of endive. **Pkt. 15¢; oz. 35¢; 4 ozs. 95¢; lb. $2.75.**

Hybrid Sweet Corn, Spancross



Squash, Burpee's Royal Acorn (left), Table Queen (right)

1021 Squash Royal Acorn

Burpee Introduction—New for 1941

82 days. One of the chief objections to the extremely popular Acorn or Table Queen Squash is its small size, one fruit furnishing only two individual portions. Royal Acorn is a family-sized Table Queen, with acorn-shaped fruits 7½ in. long and 6 in. across, dull dark green in color, turning dull orange after a period of storage. The flesh is up to 1½ in. thick, dry and sweet with baking quality as good as the smaller Table Queen. The keeping quality is excellent.

Vines are very heavy, vigorous, and productive, with large leaves. Fruits may be used for boiling when immature, but for the best quality they should be allowed to develop until the shell is hard. **Pkt. 15¢; oz. 35¢; 4 ozs. $1.00; ½ lb. $1.65; lb. $3.00.**

Burpee's Table Talk Tomato

The name that cost us $500

Mrs. J. Russell Davis, Charlottesville, Va.
Mrs. Frank M. Dosch, Richland Center, Wisc.

Wm. H. Kirby, Shirley, Mass.
Mrs. B. F. Saunders, Newburyport, Mass.

Burpee's Table Talk Tomato

1118 Burpee's Table Talk Tomato

This is the "Nameless" Tomato of last year

for which we offered $100 for a name. The winning name selected by our judges was "Table Talk," submitted by five persons, to each of whom we have sent our check for $100. The winners' names and addresses are given at the left.

Table Talk is a distinct new, all-purpose tomato—a new and different type of fruit on a new kind of vine. The plant is short stemmed and bushy, but with no self-topping tendency. The leaves are small and set closely together, dark green, thick and firm in texture, forming a dense mass of foliage which not only protects the fruit, but virtually hides it, especially in the center of the plant.

The fruit, unusual in that it combines large size with deep globular form, averages 7 to 8½ ozs. and maintains its size well throughout the season. The shoulder is smooth, there is little or no depression at the stem end, and the scar is quite small—in other words, it is refined in spite of its size. The color is bright scarlet, uniform and attractive. Slice Burpee's Table Talk Tomato and you will marvel at the structure and the firmness of its interior. First fruits ready to pick in 75 days from setting out the plants.

1077 Burpee's New Gloriana Tomato

A new tomato of the Earliana type, but preceding that variety in maturity by 3 to 5 days and excelling it in quality, fruit shape and appearance, yield, and length of bearing season. Gloriana tomato was developed from a cross of Bison and Earliana at our Michigan breeding grounds and as a result of careful selecting and reselecting on our Fordhook Farms in Pennsylvania, under the direct supervision of our tomato breeding experts, we offer a variety deserving of your attention.

The plant is small at the beginning of the season, becoming medium size when fully grown; it is indeterminate in habit, with small leaves of heavy texture. The fruit clusters are very large, the basal cluster bearing as many as 12 fruits under average conditions. Fruit is medium scarlet-red, semi-globular, neat at the shoulder, with extremely small stem, cavity and blossom scar; average weight 5 ozs., cracking less than Earliana. Interior is moderately open but firm.

Each year we conduct hundreds of trials of tomatoes on our experimental grounds. Comparative trials of Gloriana and the many different strains of Earliana convince us that Gloriana is a superior variety of the Earliana class for home garden and early market. Ripe fruit is ready to pick in about 55 days from the time the plants are set in the garden.

GREEN-POD BUSH BEANS

Beans are one of the most satisfactory and productive vegetables, because they grow so vigorously and bear with such wonderful abundance. Plants grow from 15 to 20 in. tall. Do not sow seed until the weather is quite warm; in the vicinity of Philadelphia, early May is about the right time for the first sowing. A warm, well-drained, sandy loam is best suited. The pods are most delicious if picked before they have reached full size, and the plants will continue bearing much longer. To provide for a continuous supply of tender beans, seed should be sown every 2 weeks up to August 10. Plant in rows not less than 18 in. apart; space seed 2 to 3 in. apart in the row, cover with 2 in. of soil, and firm the surface to assist germination. One pkt. of seed will sow about 25 ft. of row; one lb. 150 ft.; 60 lbs. for one acre.

10 Burpee's Stringless Green-Pod ⊙

Has the Most Delicious Flavor of all Green-Podded Beans

49 days. The attractive green pods are about 6 in. long, slightly curved, so thick, even when quite young, as to be double-barreled, and when fully grown, the pods are meaty and juicy, entirely stringless. Seeds are a dark coffee-brown color.

Burpee's Stringless Green-Pod has long been considered the standard of quality for all beans, regardless of type. Its quality and tenderness have never been duplicated. A favorite for home use as well as for canning and commercial planting. When introduced in 1896, it was the only stringless green-pod bush bean in existence. A great bean with a long and respected history, parent of many varieties and still unsurpassed for quality.

EDIBLE SOY BEAN

35 Bansei

96 days. Since the recent introduction of vegetable type soy beans into this country, the demand for seed has constantly increased. These beans are not only delicious when eaten green or dry, but they are also an excellent source of Vitamins A, B, and G. The food value is high because of the fat and protein content. The Bansei variety is one of the earliest and most productive of all and very adaptable in its growing requirements; it will produce crops in nearly any section of the country. Plants grow 24 in. high and do not require support. They are literally loaded with pods, as may be seen by looking at the picture to the right. The individual pod gives you an idea as to the size of the beans themselves. Seeds are bright green while young and yellow when mature. Ask for cooking instructions when ordering seed. **Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. $1.10; 5 lbs. $2.25; 10 lbs. or more @ 40¢ per lb.**

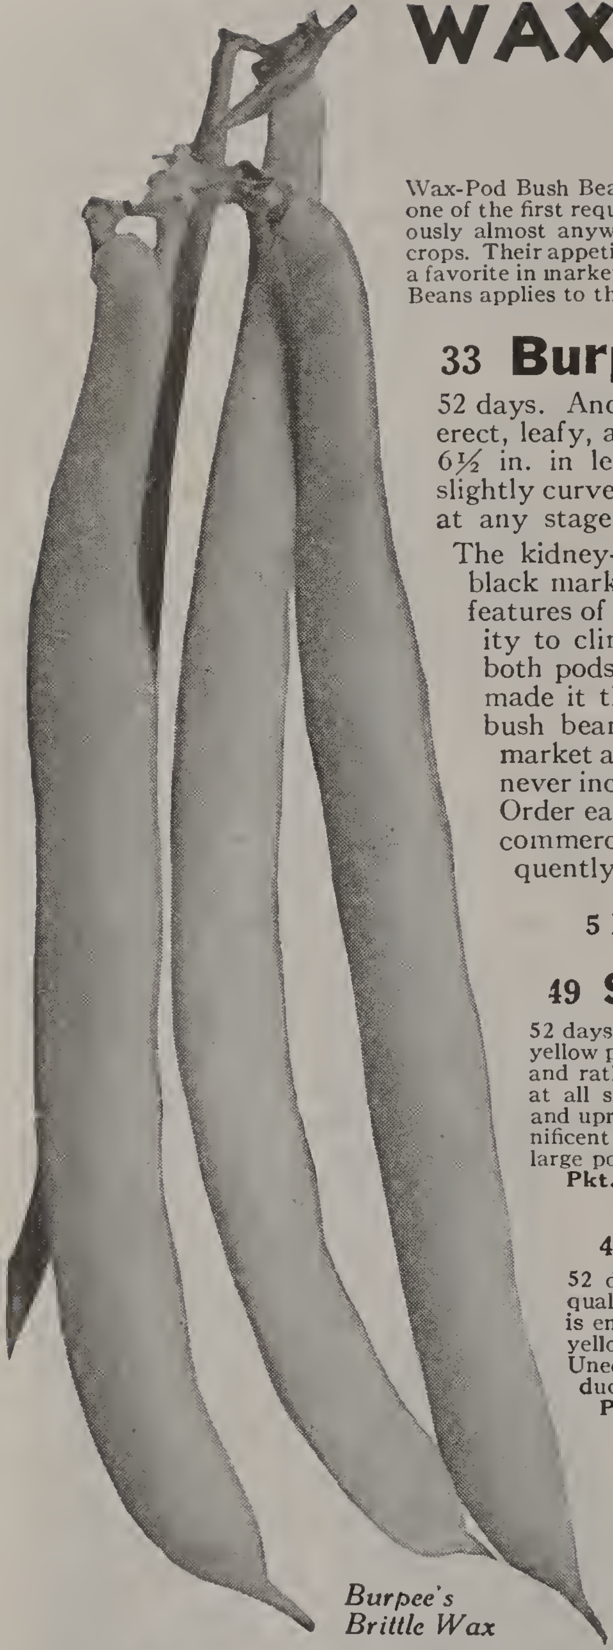
WAX OR YELLOW-POD BUSH BEANS

Wax-Pod Bush Beans share with Green-Pod Bush Beans all the qualities that make them one of the first requirements of every gardener and grower. Wax Bush Beans grow vigorously almost anywhere, present no difficulties of cultivation, and produce tremendous crops. Their appetizing, waxy yellow pods and their delicate, distinctive flavor make them a favorite in market or home garden. The planting information given for Green-Pod Bush Beans applies to the Wax Beans as well. The bushes range in size from 12 to 20 in. tall.



Burpee's Brittle Wax

33 Burpee's Brittle Wax—Stringless ⊙

52 days. Another quality Burpee variety. Plants are of medium size, erect, leafy, and very productive. The attractive pods measure 5½ to 6½ in. in length and are clear, light waxy yellow in color, round, slightly curved, and quite smooth. There is no trace of string or fiber at any stage of growth. Flesh is tender, brittle, and of fine flavor. The kidney-shaped seed is pure white with irregular black markings around the eye. The many desirable features of Brittle Wax, which include wide adaptability to climatic conditions, attractive appearance of both pods and plants, and exceptional quality, have made it the most widely planted of all wax-podded bush beans. Equally desirable for home uses, for market and for large canners. If your plantings have never included Brittle Wax, you should give it a trial. Order early, for it is so popular with both home and commercial growers that the demand for seed frequently exceeds the supply.

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Of course, the time is average and some variation is to be expected, depending on the season and locality.

44 Burpee's Kidney Wax (Stringless) ⊙

52 days. Outstanding in every way. This Burpee introduction is pronounced by many the most tasty of all beans. Prized for canning.

The popularity of this bean is due to several important factors—pods are remarkable for their meatiness, fine flavor, brittleness, attractive clean color and their absolute freedom from strings; plants are noted for their great prolificness. Kentucky Wonder Pole Bean

POLE BEANS

Pole Beans are extremely productive. They come into bearing later than the bush varieties, but bear for a longer period, and some produce bigger pods. They are less hardy, however, so should be planted a week later. They mature in from 64 to 80 days. Sow seed when the weather has warmed up, about the second week of May in vicinity of Philadelphia, and not later than June 15. Set poles 4 ft. apart and place 5 to 8 beans around each pole; one packet of seed is enough for 20 poles; 1 lb. of seed for 100 poles. When plants are well established, thin to 3 or 4 plants to a pole; or the seed may be planted along a trellis, sowing 300 ft. of row with 1 lb. of seed.

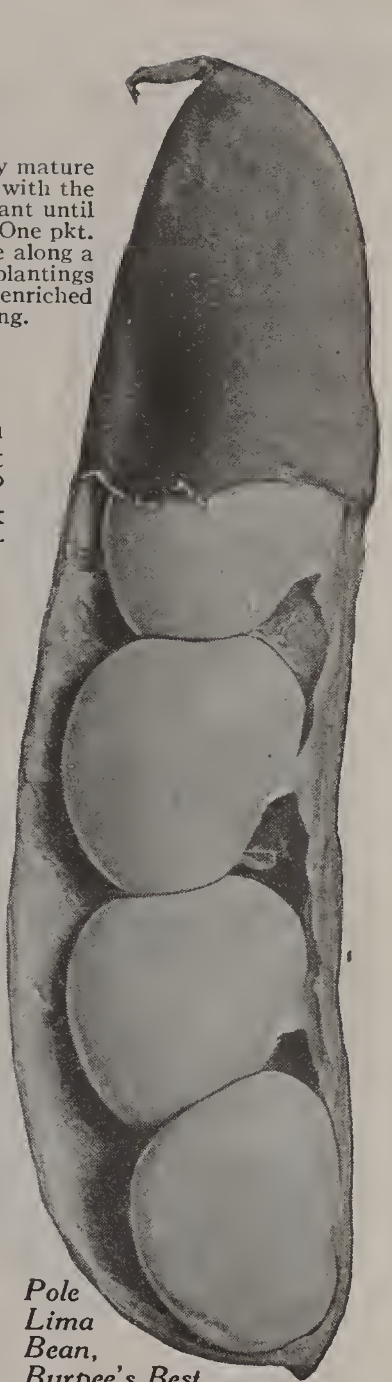
POLE LIMA BEANS

Pole Lima Beans greatly outyield the bush varieties per square foot of garden space. They mature somewhat later. Set the poles 4 ft. apart each way and place 6 to 8 seeds around each pole with the eyes down, covering with 2 in. of fine soil. Later thin to 2 or 3 plants to a pole. Do not plant until the ground is thoroughly warm, about the middle of May in the vicinity of Philadelphia. One pkt. will plant 10 poles; 1 lb. for 50 poles; 35 lbs. for one acre. Small plantings may be made along a fence or trellis, putting several beans 1 ft. apart, later thinning to one strong plant; such plantings would require 1 lb. to about 50 ft. of row. All Lima Beans prefer a warm, sandy loam soil enriched with well-rotted stable manure; wait until soil is warm and weather settled before planting.



Pole Lima Bean, Burpee's Best

105 Burpee's Best Pole Lima ⊙

92 days. The Fordhook among the pole limas. Burpee's Best has been making friends rapidly since its introduction in 1934, and we believe that it has only begun its march toward popularity. You know Fordhook Bush? Then just imagine a pole bean with all the good characteristics of Fordhook—its thick seed, straight, smooth pod, its rich tenderness, but with larger pods, and three or four times as many on each plant.

Burpee's Best will climb 10 to 12 ft. under average conditions, and produce pods along its entire length in clusters of 4 to 8. The pods are straight, 5 to 6 in. long, 1½ in. broad, and nearly one inch thick. Burpee's Best represents a marked improvement over Challenger Pole, and we suggest it to those who have been growing this older variety.

95 Burpee's Sunnybrook ⊙

84 days. The popularity of this fine pole lima bean is due to its extreme earliness and tremendous yield, each spike carrying from 5 to 10 pods of large size. The pods are closely packed with 4 and often 5 large, thick, meaty, light green beans of the finest quality. Pods grow 7 to 8 in. long and 1¼ in. wide. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. $1.55; 10 lbs. or more @ 29¢ per lb.**

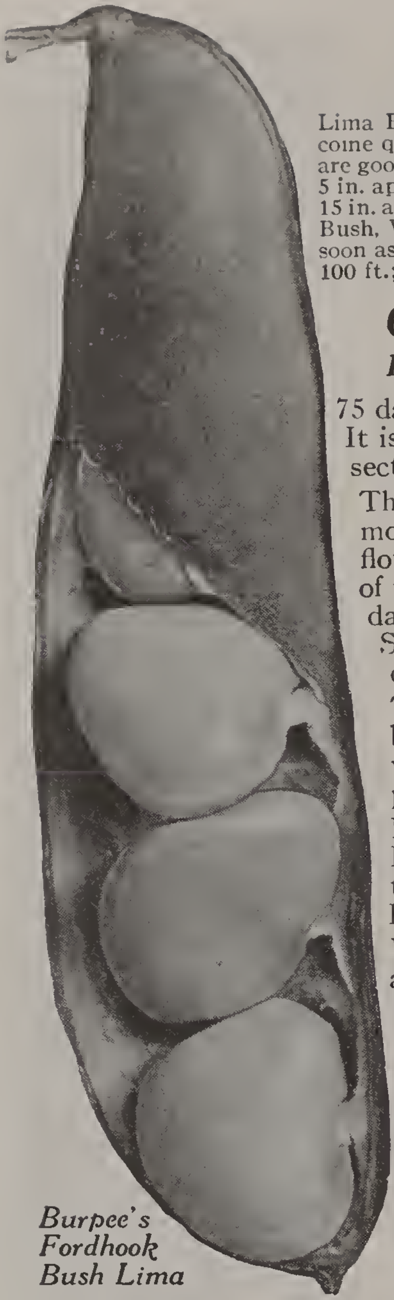
BUSH LIMA BEANS

Lima Beans are a tender vegetable and the seed must not be planted until the nights have become quite warm. The middle of May is usually safe in the vicinity of Philadelphia. Bush Limas are good yielders. Plant in a warm, well-drained, sandy loam. Plant the seeds edgewise, eye down, 5 in. apart in rows 2½ to 3 ft. apart, and cover 2 in. deep with fine soil. Later thin to stand 12 to 15 in. apart for large-seeded varieties and 9 to 12 in. for small-seeded varieties, such as Philadelphia Bush, Wood's Prolific, and Baby Fordhook. Keep the soil well cultivated, and pick the pods as soon as the beans have reached edible size. One pkt. of seed will sow 25 ft. of row; one lb. for 100 ft.; 60 lbs. to an acre.



Burpee's Fordhook Bush Lima

65 Burpee's Fordhook Bush Lima ⊙

Introduced by Burpee and named for Burpee's Fordhook Farms

75 days. Burpee's Fordhook is known and grown wherever beans are planted. It is the leading variety of bush lima beans and in the important commercial sections it is usually the only variety grown.

The plant is bushy, upright, with large leaves of heavy texture, 20 in. or more in height, with a spread of two ft. or more, very vigorous, with many flowering branches. Pods are borne close to the plant and often on the ends of the branches. They are 4 to 4½ in. long, 1 to 1¼ in. wide, and ¾ in. thick, dark green, straight to slightly curved, crowded with 3 or 4 large, thick beans. Seeds are green when immature, holding this color until quite old, becoming cream colored when dry.

The dry, mealy quality of Fordhook is familiar to every one who uses lima beans. The beans are large and there is, therefore, less waste in shelling than with other varieties. Its bearing season is long and a planting may be picked over a period of a month or more.

For home garden or commercial use we recommend this great bean highly. Fine quality, always salable, attractive appearance, and large pods allow us to say that in lima beans, Fordhook is the best. (For a pole bean of the Fordhook type, plant Burpee's Best.)

We grow our Fordhooks ourselves in California, selecting them continuously and checking over stocks by trials at Fordhook Farms. As the originator of this fine bean, we invite your order for the finest Fordhook Bush Lima Bean seed obtainable.

61 Baby Fordhook Bush Lima

70 days. A thick-seeded, small lima bean with far better quality than the flat type; bred by the U. S. Department of Agriculture. It was designed especially for canning and freezing where a high quality baby lima bean has been sought for many years. Home gardeners, too, will appreciate Baby Fordhook with its surprisingly heavy crop of pods under almost any conditions. Its quality is excellent and the beans retain their green color until they are quite old. Be sure to give this bean a trial.

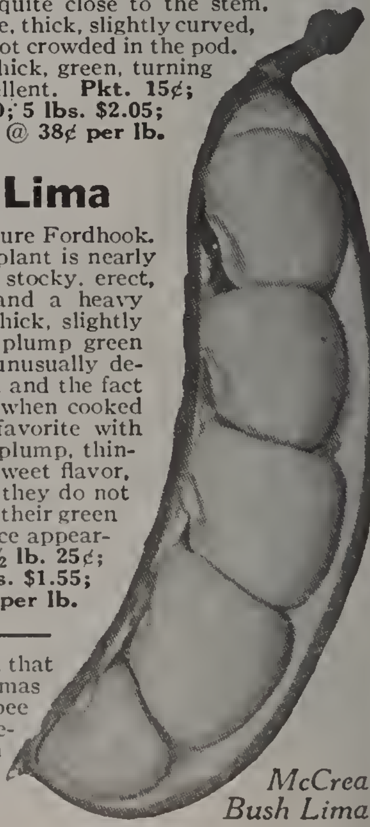
Plant is truly bush, about 14 in. tall, with shiny, dark green leaves, heavily productive, bearing pods quite close to the stem. Pods are 2¾ in. long and ¾ in. wide, thick, slightly curved, containing 3 or 4 beans, close but not crowded in the pod. See picture in lower left. Seed is thick, green, turning cream when dry. Quality is excellent. **Pkt. 15¢; ½ lb. 35¢; lb. 60¢; 2 lbs. $1.10; 5 lbs. $2.05; 10 lbs. or more @ 38¢ per lb.**

Baby Fordhook Bush Lima

64 McCrea Bush Lima

76 days. McCrea Bush is a Miniature Fordhook. While the seed itself is small, the plant is nearly as large as Fordhook. Plants are stocky, erect, dark green, of medium season, and a heavy yielder of pods which are rather thick, slightly curved, and contain from 3 to 5 plump green beans of true potato type. The unusually delicious flavor of this miniature lima and the fact that the beans retain a green tint when cooked have already made it a popular favorite with home and market gardeners. The plump, thin-skinned beans have an unusually sweet flavor, different from any other lima, and they do not break up in cooking. As they retain their green color when cooked, they make a nice appearance when served. **Pkt. 10¢; ½ lb. 25¢; lb. 45¢; 2 lbs. 85¢; 5 lbs. $1.55; 10 lbs. or more @ 29¢ per lb.**

Burpee takes pride in pointing out that four of the seven varieties of bush limas listed on these two pages are Burpee introductions. Every one has become popular; each is distinct enough from the other as to build up an enormous demand for all four. **Buy from the originator!**



McCrea Bush Lima

63 Burpee's Improved Bush Lima Bean ⊙

Another World Famous Burpee Introduction

75 days. The best of the flat-seeded bush limas, and a decided improvement over Burpee's Bush. The seeds and pods are larger, and the plants are more productive. Plants of Burpee's Improved are large and vigorous, meeting in a three-foot row under average conditions. They are of true bush habit, but when well grown will send out lateral, pod-bearing branches which rarely exceed 18 in. in length and do not require support. Pods are 5 to 5½ in. long, and 1 to 1⅛ in. broad, slightly curved and moderately thick, containing 4 or 5 very large beans of attractive appearance and fine quality.

Burpee's Improved is popular where a lima with a somewhat flatter seed than Fordhook is demanded. It is easy to shell. Distinct enough from Fordhook in shape and flavor, it supplements rather than competes with that excellent variety. Try both kinds in your garden this season. You can't go wrong with either.

Burpee's Philadelphia Bush Lima

60 Burpee's Bush Lima

78 days. The original dwarf, large-seeded Bush Lima. First introduced exclusively by Burpee in 1890. It is an immense yielder. The pods and beans, however, are not so large, nor are the bushes so prolific, as those of the Burpee Improved Bush Lima. The bushes, 18 to 24 in. tall, are of stout, erect growth, yet branching so vigorously that each plant develops into a rounded plant about 2 ft. in diameter. Pods grow 4½ to 5 in. long and contain 3 or 4 large beans of excellent quality and as large as those of pole limas.

68 days. **Improved Henderson Bush** or **Baby Lima.** One of the earliest maturing bush lima beans, so is especially desirable in northern states where growing seasons are short. Pods are small, 3 to 3½ in. long, each containing 3 or 4 plump beans of delicious, sweet, buttery lima flavor. Plants are truly prolific, and while they begin to bear very early, they will continue to produce until killed by frost.

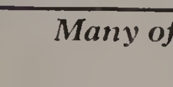
68 days. Of special value because it is the largest-seeded bush lima that produces well under dry, hot conditions. Upright plants bear an abundance of pods from 4 to 4½ in. long, each containing 3 or 4 medium-sized beans. The hardiness of this variety, along with its excellent quality, have made this bean popular wherever grown. **Pkt. 10¢; ½ lb. 25¢; lb. 40¢; 2 lbs. 75¢; 5 lbs. $1.40; 10 lbs. or more @ 26¢ per lb.**



Follow the Bull's Eye We have used this mark ⊙ for years to guide the gardener in the selection of varieties which we believe will give the best results under varied conditions of soil and climate. This mark ⊙, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the **best of their class.** If you are not thoroughly posted which varieties to choose as the most suitable for your particular section, we suggest that you make your selection from those marked with the bull's eye. They have been found most reliable under all conditions.

TABLE BEETS

Sow seeds as early in the spring as the ground can be worked. For a continuous supply make sowings 3 to 4 weeks apart up to the end of July. Sow seed in rows 1½ to 2 ft. apart and cover 1 in. deep. Thin plants to stand 3 to 4 in. apart in the row. The later sowings will produce the best beets for winter storing. Gather the roots with the approach of cold weather and keep in a cool cellar, packing them in slightly moist earth until ready to use. Beet tops are used quite extensively for "greens." One pkt. of seed will sow 25 ft. of row; one oz. for 100 ft.; use 4 to 6 lbs. for an acre.

YELLOWS-RESISTANT CABBAGE

Yellows-resistant strains were introduced by the Wisconsin Agricultural Experimental Station so that cabbages could be grown in localities where infested "cabbage-yellows" soil had prevented non-resistant varieties from producing a crop. If you live in such a locality and have had trouble, try the following varieties:

191 Early Jersey Wakefield ⊙

63 days. An improved strain especially selected for yellows-resistance. The heads are of conical form, with a broad base and pointed top. Compact plants and very productive. About the first of this group of resistant cabbages to mature. **Pkt. 10¢; oz. 40¢; 4 ozs. $1.15; ½ lb. $2.05; lb. $3.75.**

Plants are short stemmed, erect, with few outer leaves. A remarkably uniform and refined strain of exceptional quality and fair keeping ability. **Pkt. 15¢; oz. 50¢; 4 ozs. $1.50; ½ lb. $2.75; lb. $5.00.**

CAULIFLOWER

For an early crop, start the seed indoors or under glass in late February and set plants into the garden when soil has become warm. For a main or fall crop, sow the seed during June and set plants out in early July. It takes about 30 to 40 days for the plants to grow large enough for setting into the field. One pkt. of seed will produce about 150 plants; 1 oz. 4000 plants; 2 ozs. for one acre. Days to maturity are from field setting of plants. Treat seed with Semesan to prevent damping off.

CARROTS

Sow seed thinly in shallow drills early in the spring in rows not less than 12 in. apart. Make succession sowings every two weeks up to the early part of July. When well started, thin the small early varieties to stand 2 in. apart in the row and the larger later varieties from 3 to 4 in. A rich, mellow, deeply worked soil gives the finest carrots. Cultivate throughout the season to insure smooth, straight roots. For winter storing, sow about the middle of June, which will make full size roots before cold weather sets in. 1 pkt. of seed will sow 50 ft. of row; 1 oz. 200 ft., 3 lbs. for one acre.

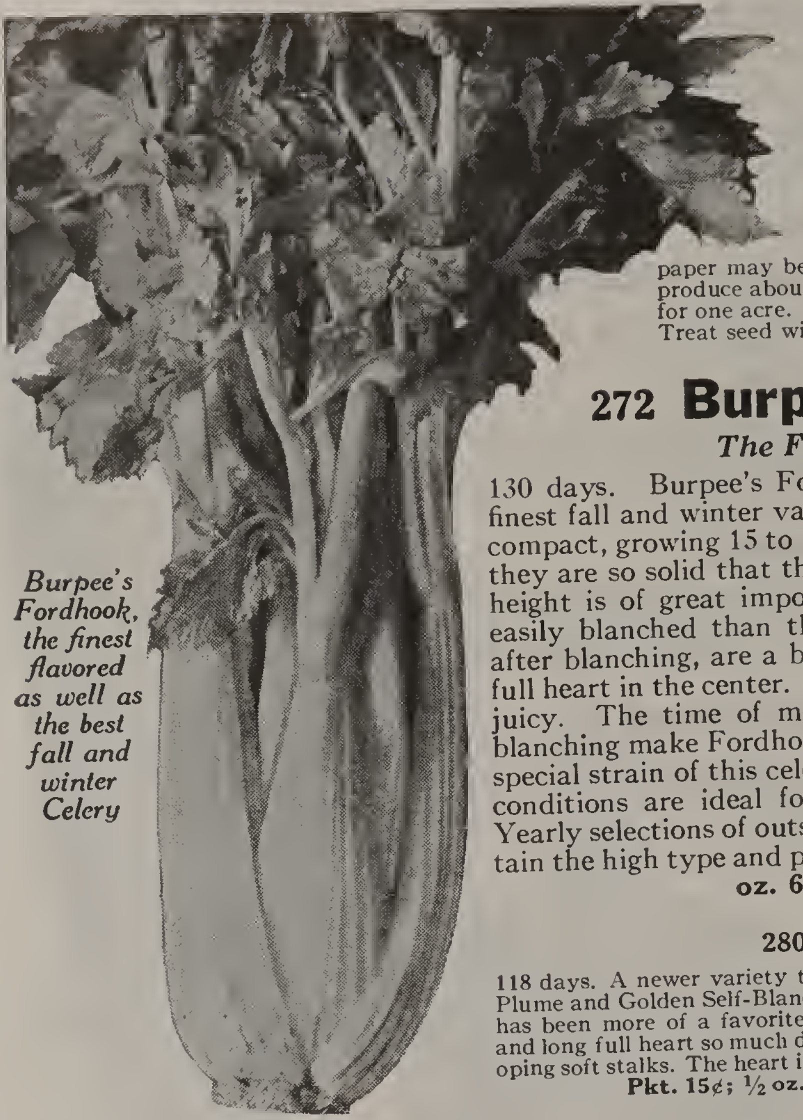
CELERY



Burpee's Fordhook, the finest flavored as well as the best fall and winter Celery

One pkt. of seed will produce about 400 strong plants; 1 oz. about 7500 plants; 4 ozs. for one acre. Days to maturity are from field setting of plants. Treat seed with Cuprocide or Semesan.

130 days. Burpee's Fordhook Celery is, without question, the finest fall and winter variety in existence. Plants are stocky and compact, growing 15 to 18 in. tall. Although comparatively dwarf, they are so solid that they weigh fully 2 lbs. each. Their limited height is of great importance since the plants are by far more easily blanched than those of the taller varieties. The stalks, after blanching, are a beautiful pure silvery white with a tender full heart in the center. Always tender, crisp, without strings, and juicy. The time of maturity and the dark green color before blanching make Fordhook an ideal variety for winter storage. Our special strain of this celery is grown on our Western farms, where conditions are ideal for the production of plump, vital seeds. Yearly selections of outstanding plants are made in order to maintain the high type and purity of the variety. **Pkt. 25¢; ½ oz. 35¢; oz. 60¢; 4 ozs. $1.85; ½ lb. $3.45; lb. $6.25.**

280 Florida Golden

118 days. A newer variety that has some of the good qualities of both Golden Plume and Golden Self-Blanching. We do not know of any type of celery that has been more of a favorite than Florida Golden. It has the long first joint and long full heart so much desired, and stands cold weather well without developing soft stalks. The heart is a light golden color; tender and crisp; nutty flavor. **Pkt. 15¢; ½ oz. 45¢; oz. 80¢; 4 ozs. $2.40; ½ lb. $4.40; lb. $8.00.**

266 White Plume

112 days. The earliest and the most easily blanched celery; at its best right after digging. Foliage is light green tinted with white. When blanched, the stalks are pure snowy white, tender and crisp, without any fiber or strings. Flavor is rich and nutty. A favorite for fall and early winter use. Not suitable for winter storage. **Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 90¢; ½ lb. $1.40; lb. $2.50.**

267 Easy Blanching

125 days. A second-early celery which will be ready for use soon after Golden Self-Blanching. Plants make a vigorous, upright yet compact growth, and the stalks are easily blanched. They are thick, solid, heavy, unusually meaty, pure white, crisp, altogether free from any fiber or strings, and of extra-fine flavor. Hardier than Golden Self-Blanching. Desirable for home and market garden. **Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.20; ½ lb. $2.20; lb. $4.00.**

It exhibits all the excellent qualities of the original, and is sown extensively by home gardeners as well as by market growers. The plants are heavy and solid. The heart is large, tender, firm, and has a delightful nutty, crisp, and juicy flavor. **Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.20; ½ lb. $2.20; lb. $4.00.**

268 Golden Plume ⊙

115 days. Also called **Wonderful,** a name that is most appropriate for this splendid early celery. Some gardeners consider it the best early celery in existence. It is quite resistant to blight and rot and possesses very good eating qualities. Plants are of medium size, stocky, compact, and have a thick, full, creamy heart of the highest table quality. The thick, heavy stalks blanch readily. Fine for home and market garden. Sweet flavor; tender and crisp.

270 French Special Golden Plume

110 days. An unusually thick-set, compact celery; has no soft stalks, and is free from strings. The rib is 9 to 10 in. to the first joint. Being solid and firm, it is less liable to damage by heat or cold. Plants are medium size and stocky. The full-hearted, thick, solid stalks bleach readily and are of the finest table quality. A most desirable celery for market and home use.

Pkt. 25¢; ½ oz. 65¢; oz. $1.20; 4 ozs. $3.60; ½ lb. $6.60; lb. $12.00.

282 Giant Pascal

135 days. Considered by many the standard winter celery. The plants are productive, with tall, upright leaves of a rich dark green color. The stalks are tall and thick. They are broad, distinctly ribbed, tender, crisp, and very tasty. After blanching they are an attractive light yellow. Inasmuch as the stalks are green, soil should be used for blanching. It will keep in perfect condition throughout the winter months.

Pkt. 10¢; ½ oz. 25¢; oz. 40¢; 4 ozs. $1.15; ½ lb. $1.80; lb. $3.25.

276 Utah or Golden Crisp ⊙

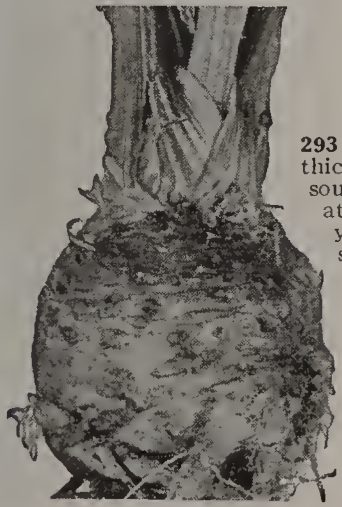
275 Winter Queen

120 days. One of the finest dwarf winter celeries we have ever grown. It resembles Golden Self-Blanching in height and habit, but the leaves are a rich green color and in this respect are not unlike those of Giant Pascal. As it blanches quickly it is ready for home or market much earlier in the fall. The plants make stout bunches of extra-heavy stalks with very large, tightly folded, creamy white hearts.

Pkt. 10¢; ½ oz. 20¢; oz. 35¢; 4 ozs. $1.00; ½ lb. $1.65; lb. $3.00.



CELERIAC

or Turnip-Rooted Celery

293 Giant Prague 120 days. The edible portion is the large, thick root, which is highly valued boiled, or is used in vegetable soup, stews, and other dishes. Celeriac grows best in a moderately moist yet well-drained soil, which is fairly rich in barnyard manure. Frequent cultivation is necessary and occasional waterings are desirable. Start the seed in boxes indoors, and when the seedlings are large enough to handle, transplant into the garden to stand about 8 to 10 in. apart each way. Use when the roots are of moderate size. Does not require blanching. The flavor of celeriac is similar to that of celery. Highly appreciated in European countries, and becoming most popular in the United States; more so when it becomes better known. Roots may be stored in moist earth or sand, as you would beets and carrots, and used throughout the winter.

Pkt. 10¢; ½ oz. 20¢; oz. 30¢; 4 ozs. 85¢; ½ lb. $1.25; lb. $2.25.

Utah Celery

SWEET CORN

Plant the seed after all danger of frost has passed, in rows 2½ to 4 ft. apart, spacing the seeds 4 to 6 in. apart in the row, and thinning later to 12 inches; or plant in hills 3 to 4 ft. each way, allowing 2 to 4 plants to remain in each hill, depending on the fertility of your soil. For a continuous supply, sow varieties which mature in succession; also make succession sowings every 10 to 14 days until July 10—Sweet Corn maturing in the cool fall weather is excellent. Corn should be planted in blocks rather than in a single long row, since pollination and the development of a full set of kernels is then insured. One pkt. of seed will plant 100 ft. of row; 1 lb. 350 ft.; 12½ lbs. for one acre.

BURPEE'S CUCUMBERS

Make your first sowing of cucumbers after all danger of frost has passed to supply fruits for summer use, and a second sowing in late June or early July to furnish cucumbers for fall use and pickling. They succeed best in a fertile, light, well-drained soil. Well-rotted manure in the hills and a side-dressing of commercial fertilizer are usually beneficial. Plant in hills 4 or 5 ft. apart, placing 8 to 10 seeds in each hill, and cover with ½ in. of soil. When plants are 6 to 8 in. high, thin to 3 or 4 plants to a hill. One pkt. of seed will plant 15 hills; 1 oz. 50 hills; 2 lbs. for one acre. If seed is drilled, one acre requires about 4 lbs. of seed. Control cucumber insects with Red Arrow Garden Spray and Slug Shot Dust. Treat seed with Cuprocide. See page 125 for explanation of white spine and black spine cucumbers.

WATERMELONS

Rich, rather sandy soils produce the finest crops of watermelons, but a well-drained loam, especially with a southern exposure, is also suitable. Two shovelfuls of well-decomposed manure should be mixed with the soil under each hill. Watermelons should not be planted until the weather is quite warm. The hills should be about 6 to 8 ft. apart. Place 6 to 8 seeds in a circle in each hill, and cover ½ in. deep with fine soil. Thin to 2 or 3 plants in each hill. Larger and better watermelons can be obtained if all but 2 or 3 are removed from each vine. One pkt. will plant 12 hills; 1 oz. 25 hills; 3 to 4 lbs. for one acre. In northern states, plant Burpee's Fordhook, Cole's, or Early Northern Sweet.

ONION and GARLIC SETS

For large quantities, write for special prices

It pays to plant sets of the very best quality which have nothing in common with the cheap unreliable kinds so often offered. Please write for quotations on large quantities as prices vary with the market. One lb. of onion sets will plant 100 ft. of row; 250 to 325 lbs. are needed for one acre. Plant as early in the spring as possible.

9969 Ebenezer or Japanese ⊙

These sets are of the highest type. They are produced under ideal conditions from a select strain of seed, carefully screened and graded, and stored at the proper temperature until used. Ebenezer is one of the best of all winter keepers and, therefore, much used by large growers. Produces medium sized bulbs, flattened globe in shape, and light golden brown in color. The flesh is yellowish white. **Lb. 25¢; 2 lbs. 40¢; 5 lbs. or more @ 17¢ per lb.**

ONIONS

The soil best suited to grow a good crop of onions is one that is reasonably fertile, well drained, and well prepared. Sow seed as early in the spring as the ground can be worked; space rows 1 to 1½ ft. apart. Cover the seed lightly, and when the seedlings are 3 to 4 in. tall, thin them to stand sufficiently far apart to develop without touching one another. When the bulbs have reached maturity, bend down the tops to hasten ripening before the onions are harvested. One pkt. of seed will sow about 50 ft. of row; 1 oz. 200 ft.; 4 to 5 lbs. one acre. Japanese Bunching and White Welsh, which are used as green onions or scallions, are best planted in July for harvest the following spring.

HARDY BUNCHING ONIONS

These varieties of onions are grown for use as scallions or green bunching onions. They are perennial and produce for many years as long as a portion of the plant is allowed to remain. Sow in the spring or summer and harvest in the fall or early the following spring. EDIBLE-PODDED or SUGAR PEAS

Cook like string beans

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. Pick pods when peas are beginning to form and cook like snap beans. When young, pods are stringless, brittle and succulent. Should pods develop too fast for use as snap or string beans, seeds may be eaten as shelled peas. Vines should be given support of string or brush for best results.

California Wonder

PEPPERS

Seed should be sown in a hotbed or in a shallow box in a warm place in the house, allowing 8 to 10 weeks to produce plants large enough to set outdoors when all danger of frost is past. Days to maturity given in descriptions are from time plants are set in the garden. Peppers prefer a moderately light, well-fertilized soil. They should be set in rows 2 to 3 ft. apart, spaced 18 to 24 in. apart in the row. One pkt. of seed will produce about 100 plants; 1 oz., 1500 plants; 4 to 6 ozs. will produce enough plants for one acre. Treat seed with Cuprocide or Semesan to prevent damping off.

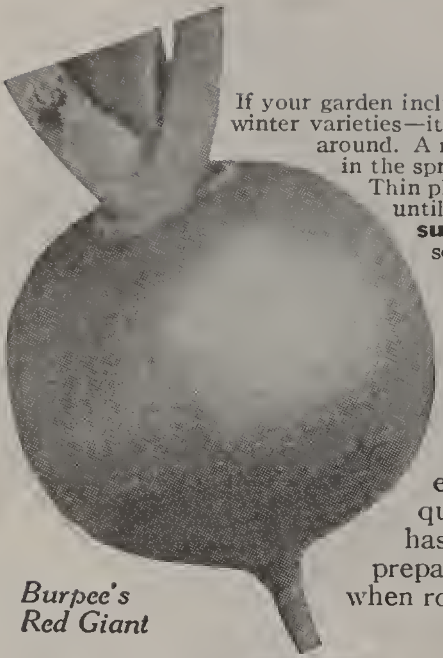
RADISHES



Burpee's Red Giant

If your garden includes some of each of the three different classes of radishes—spring, summer, and winter varieties—it will easily keep you supplied with this refreshing vegetable practically all year around. A moderately light soil produces the smoothest and best roots. Sow the seed as early in the spring as the ground can be worked, in rows 12 to 18 in. apart, covering ½ in. deep. Thin plants to stand 1 to 1½ in. apart in the row. Make succession plantings every week until early summer, then resume one month before frost. This applies to **spring** and **summer** radishes; seed of **winter radishes** is not sown until June. One pkt. will sow about 20 ft. of row; 1 oz. 100 ft.; 10 to 12 lbs. for one acre.

SPRING VARIETIES

BURPEE'S TOMATOES

Tomatoes should be in every garden. It is quite simple to grow your own plants. Sow the seed in a hotbed, or in a shallow box in the house, allowing 5 to 6 weeks to produce plants large enough for setting outdoors when weather becomes warm. Sow in rows 3 in. apart and cover with ¼ in. of soil. When plants are about 2 in. tall, transplant to stand 4 in. apart in the row or pot singly in 3 in. pots. Plant outdoors when all danger of frost is past, in rows 4 ft. apart and 3 or 4 ft. apart in the row. One pkt. will produce about 300 plants; 1 oz. 2000 plants; 2 ozs. will produce enough plants for one acre. Days to maturity are from field setting of the plants. Treat seed with Semesan or Cuprocide.
